MOP Connection: Electric Circuits: sublevels 5 and 6

- Matching:** Identify the units on the following electrical quantities by placing a letter in the blank.
 The unit of charge is the _____.
 The unit of electric potential is the _____.
 The unit of power is the _____.
 The unit of potential energy is the _____.
 The unit of current is the _____.
 The unit of resistance is the _____.
 Choices: A. Coulombs
 B. Amperes
 C. Volts
 D. Ohms
 E. Joules
 F. Watts
- An **electric potential diagram** is a useful means of representing the potential of a positive charge as it moves around a circuit. The electric potential of a charge at strategic locations in a circuit is represented on a chart. Points on the circuit where the charge has the highest potential are located highest on the chart; points of lowest potential are located lowest on the charts. At some points on the circuit, charges have approximately the same amount of potential. Construct electric potential diagrams for the following circuits. Label the points.

a.

b.

- Given the circuit at the right with the listed current and resistance values, determine the electric potential at the indicated positions. Note that you are to find the electric potential (or voltage) and NOT the electric potential difference (or voltage drop).

$$V_A = \text{_____} V \quad V_B = \text{_____} V$$

$$V_C = \text{_____} V \quad V_D = \text{_____} V$$

$$V_E = \text{_____} V$$

- Determine the following quantities for the circuit in question #3 above. PSYW
 a. The overall power.
 b. The power of the 6-ohm light bulb.
 c. The overall resistance.
 d. The energy used by the circuit in 10 minutes.

The Dialectic Relation Between Physics and Mathematics in the XIXth Century Evelyne Barbin, Raffaele Pisano, 2013-04-02 The aim of this book is to analyse historical problems related to the use of mathematics in physics as well as to the use of physics in mathematics and to investigate Mathematical Physics as precisely the new discipline which is concerned with this dialectical link itself So the main question is When and why did the tension between mathematics and physics explicitly practised at least since Galileo evolve into such a new scientific theory The authors explain the various ways in which this science allowed an advanced mathematical modelling in physics on the one hand and the invention of new mathematical ideas on the other hand Of course this problem is related to the links between institutions universities schools for engineers and industries and so it has social implications as well The link by which physical ideas had influenced the world of mathematics was not new in the 19th century but it came to a kind of maturity at that time Recently much historical research has been done into mathematics and physics and their relation in this period The purpose of the Symposium and this book is to gather and re evaluate the current thinking on this subject It brings together contributions from leading experts in the field and gives much needed insight in the subject of mathematical physics from a historical point of view
