FCM. ,1980 *Augustine's Invention of the Inner Self* Phillip Cary,2003-04-03 In this book Phillip Cary argues that Augustine invented the concept of the self as a private inner space a space into which one can enter and in which one can find God Although it has often been suggested that Augustine in some way inaugurated the Western tradition of inwardness this is the first study to pinpoint what was new about Augustine s philosophy of inwardness and situate it within a narrative of his intellectual development and his relationship to the Platonist tradition Augustine invents the inner self Cary argues in order to solve a particular conceptual problem Augustine is attracted to the Neoplatonist inward turn which located God within the soul yet remains loyal to the orthodox Catholic teaching that the soul is not divine He combines the two emphases by urging us to turn in then up to enter the inner world of the self before gazing at the divine Light above the human mind Cary situates Augustine s idea of the self historically in both the Platonist and the Christian traditions The concept of private inner self he shows is a development within the history of the Platonist concept of intelligibility or intellectual vision which establishes a kind of kinship between the human intellect and the divine things it sees Though not the only Platonist in the Christian tradition Augustine stands out for his devotion to this concept of intelligibility and his willingness to apply it even to God This leads him to downplay the doctrine that God is incomprehensible as he is convinced that it is natural for the mind s eye when cleansed of sin to see and understand God In describing Augustine s invention of the inner self Cary s fascinating book sheds new light on Augustine s life and thought and shows how Augustine s position developed into the more orthodox Augustine we know from his later writings

Questions of Form Joëlle Proust, 1989 Questions of Form was first published in 1989 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions In Questions on Form Joelle Proust traces the concept of the analytic proposition from Kant s development of the notion down to its place in the work of Rudolf Carnap a founder of logical empiricism and a key figure in contemporary analytic philosophy Using a method known in France as *topique comparative* she provides a rigorous exposition of analyticity situating it within four major philosophical systems those of Kant Bolzano Frege and Carnap and clearly delineating its development from one system to the next Proust takes as her point of departure Kant s distinction between analytic and synthetic judgments Though she makes clear that Kant drew on Locke Hume and Leibniz she argues that his notion of analyticity was innovative not simply an elaboration of something already found in their work She shows that the analytic proposition unexpectedly given its modest status in Kant came to play an important part in

efforts to convert problems considered transcendental into questions of belonging to formal logic. Ultimately her comparison of their systems reveals that the concept of the analytic, however specific its role in each, remains linked to a foundationalist strategy in effect to the transcendentalist questions Kant used when he reinterpreted the findings of his empiricist predecessors. Hence this book's provocative claim: today's so-called logical empiricism owes much more to Kant's notion of science than to Hume's.

Curricular Program Implementation in the Context of Randomized Field Trials Gloria Isabel Miller, 2011 Abstract: curricular program implementation in the context of randomized field trials. Gloria Isabel Miller: This study examined three cases of commercially available curricular program implementations to determine if a unified approach to measuring the level of implementation was possible: proof of concept. Further, the study investigated whether the level of curriculum and implementation plan specificity made a difference to the strength of implementation achieved in classrooms and described the implementation evolution in different contexts. The study sample consists of a total of 163 teachers in eight school districts across the United States. In each case, teachers were randomly assigned to using the curricular innovation or their currently used materials and processes. The three cases: HS Math, NewScience, and MathIntervention were purposely chosen to represent three different points of curricular and implementation specificity and two different subject areas: math and science. Each case features a commercially available program that also had opportunities for teachers to use electronic technology to enhance their learning or to engage their students. The cases represent differing student grade levels. The cases are different enough to provide a range that exercises the measurement techniques introduced in this study so results can begin to generalize across curricular programs and grades. However, the cases are similar enough in research design, instrumentation, and data collection methods to make them comparable. A key contribution of this investigation is the creation of a framework to measure the level of implementation: the extent to which the teacher and students display the actions, behaviors, and interactions expected by using the innovation. The unified conceptual framework arrived at by using an Activity Theory perspective together with the analytical methods employed provides a way to view the rich, complex interaction of implementation as a system with the larger system of the school organization. Data from the analysis revealed that variations in the level of implementation were no different regardless of the level of specificity. A strong finding of this work is that implementation evolves slowly even when the curricular program is scripted and coaching support is provided to teachers. The paper concludes with implications for policy and future research.

The Paradox of Relevance Carol J. Greenhouse, 2011-05-05 Selected by Choice magazine as an Outstanding Academic Title Between 1990 and 1996 the U S Congress passed market based reforms in the areas of civil rights welfare and immigration in a series of major legislative initiatives These were announced as curbs on excessive rights and as correctives to a culture of dependency among the urban poor stock images of racial and cultural minorities that circulated well beyond Congress But those images did not circulate unchallenged even after congressional opposition failed In *The Paradox of Relevance* Carol J Greenhouse provides a political and literary history of the anthropology of U S cities in the 1990s where below the radar New Deal liberalism with its iconic bond between society and security continued to thrive *The Paradox of Relevance* opens in the midst of anthropology s so called postmodern crisis and the appeal to relevance as a basis for reconciliation and renewal The search for relevance leads outward to the major federal legislation of the 1990s and the galvanic political tensions between rights and market based reforms Anthropologists efforts to inform those debates through relevant ethnography were highly patterned revealing the imprint of political tensions in shaping their works central questions and themes as well as their organization narrative techniques and descriptive practices In that sense federal discourse dominates the works demonstrations of ethnography s relevance however the authors simultaneously resist that dominance through innovations in their own literariness in particular drawing on diasporic fiction and sociolegal studies where these articulate more agentic meanings of identity and difference The paradox of relevance emerges with the realization that in the context of the times affirming the relevance of ethnography as value neutral science required the textual practices of advocacy and art

Monegato, G. vanden Berghe, 2001-06-20 homepage sac.cam.ac.uk/na2000/index.html 7 Volume Set now available at special set price This volume contains contributions in the area of differential equations and integral equations Many numerical methods

have arisen in response to the need to solve real life problems in applied mathematics in particular problems that do not have a closed form solution Contributions on both initial value problems and boundary value problems in ordinary differential equations appear in this volume Numerical methods for initial value problems in ordinary differential equations fall naturally into two classes those which use one starting value at each step one step methods and those which are based on several values of the solution multistep methods John Butcher has supplied an expert's perspective of the development of numerical methods for ordinary differential equations in the 20th century Rob Corless and Lawrence Shampine talk about established technology namely software for initial value problems using Runge Kutta and Rosenbrock methods with interpolants to fill in the solution between mesh points but the slant is new based on the question How should such software integrate into the current generation of Problem Solving Environments Natalia Borovikh and Marc Spijker study the problem of establishing upper bounds for the norm of the n th power of square matrices The dynamical system viewpoint has been of great benefit to ODE theory and numerical methods Related is the study of chaotic behaviour Willy Govaerts discusses the numerical methods for the computation and continuation of equilibria and bifurcation points of equilibria of dynamical systems Arieh Iserles and Antonella Zanna survey the construction of Runge Kutta methods which preserve algebraic invariant functions Valeria Antohe and Ian Gladwell present numerical experiments on solving a Hamiltonian system of H non and Heiles with a symplectic and a nonsymplectic method with a variety of precisions and initial conditions Stiff differential equations first became recognized as special during the 1950s In 1963 two seminal publications laid the foundations for later development Dahlquist's paper on A stable multistep methods and Butcher's first paper on implicit Runge Kutta methods Ernst Hairer and Gerhard Wanner deliver a survey which retraces the discovery of the order stars as well as the principal achievements obtained by that theory Guido Vanden Berghe Hans De Meyer Marnix Van Daele and Tanja Van Hecke construct exponentially fitted Runge Kutta methods with s stages Differential algebraic equations arise in control in modelling of mechanical systems and in many other fields Jeff Cash describes a fairly recent class of formulae for the numerical solution of initial value problems for stiff and differential algebraic systems Shengtai Li and Linda Petzold describe methods and software for sensitivity analysis of solutions of DAE initial value problems Again in the area of differential algebraic systems Neil Biehn John Betts Stephen Campbell and William Huffman present current work on mesh adaptation for DAE two point boundary value problems Contrasting approaches to the question of how good an approximation is as a solution of a given equation involve i attempting to estimate the actual error i.e. the difference between the true and the approximate solutions and ii attempting to estimate the defect the amount by which the approximation fails to satisfy the given equation and any side conditions The paper by Wayne Enright on defect control relates to carefully analyzed techniques that have been proposed both for ordinary differential equations and for delay differential equations in which an attempt is made to control an estimate of the size of the defect Many phenomena incorporate noise and the numerical
