 Pramling, 2014-10-01 This book moves beyond the traditional constructivist and social constructivist view of learning and
 development in science It draws upon cultural historical theory in order to theorise early childhood science education in
 relation to our currently globalised education contexts The book argues that concept development in science for young
 children can be better theorised by using Vygotsky's concept of Imagination and creativity Vygotsky's theory of play and his
 work on higher mental functions particularly the concept of inter and intrapsychological functioning Key concepts are
 extracted from the theoretical section of the book and used as categories for analysis in presenting evidence and new ideas in
 the second section of the book In this second part of the book the authors examine how science knowledge has been
 constructed within particular countries around the globe where empirical research in early childhood science education has
 occurred The third part of the book examines the nature of the encounter between the teacher and the child during science
 learning and teaching In the final part of the book the authors look closely at the range of models and approaches to the
 teaching of early childhood science that have been made available to early childhood teachers to guide their planning and
 teaching They conclude the book with a theoretical discussion of the cultural historical foundation for early childhood science
 education followed by a model of teaching scientific concepts to young children in play based settings including homes and
 community contexts *Instructional Materials Approved for Legal Compliance, 1987-88* California. State Department of
