**Community Ecology** Herman A. Verhoef, Peter J. Morin, 2010 Community ecology is the study of the interactions between populations of co existing species Co edited by two prominent community ecologists and featuring contributions from top researchers in the field this book provides a survey of the state of the art in both the theory and applications of the discipline It pays special attention to topology dynamics and the importance of spatial and temporal scale while also looking at applications to emerging problems in human dominated ecosystems including the restoration and reconstruction of viable communities Community Ecology Processes Models and Applications adopts a mainly theoretical approach and focuses on

the use of network based theory which remains little explored in standard community ecology textbooks The book includes discussion of the effects of biotic invasions on natural communities the linking of ecological network structure to empirically measured community properties and dynamics the effects of evolution on community patterns and processes and the integration of fundamental interactions into ecological networks A final chapter indicates future research directions for the discipline
