The United Nations World Water Development Report UNESCO World Water Assessment Programme, 2022-03-02
Accounting for approximately 99% of all liquid freshwater on Earth groundwater has the potential to provide societies with tremendous social economic and environmental benefits and opportunities However this natural resource is often poorly understood and consequently undervalued mismanaged and even abused In spite of its overall abundance groundwater remains vulnerable to over exploitation and pollution both of which can have devastating effects on the resource and its availability In the context of growing water scarcity across many parts of the world the enormous potential of groundwater and the need to manage it sustainably can no longer be overlooked The 2022 edition of The United Nations World Water Development Report describes the challenges and opportunities associated with the development management and governance of groundwater across the world Water-resources Investigations Report ,1998 **Selected Water**

Lawrence Dingman, 2015-01-09 For twenty years Lawrence Dingman's well written comprehensive Physical Hydrology has set standards for balancing theoretical depth and breadth of applications Rich in substance and written to meet the needs of future researchers and experts in the field Dingman treats hydrology as a distinct geoscience that is continually expanding to deal with large scale changes in land use and climate The third edition provides a solid conceptual basis of the subject and introduces the quantitative relations involved in answering scientific and management questions about water resources The text is organized around three principal themes the basic concepts underlying the science of hydrology the exchange of water and energy between the atmosphere and the earth's surface and the land phase of the hydrologic cycle Dingman supplies the basic physical principles necessary for developing a sound instructive sense of the way in which water moves on and through the land in addition he describes the assumptions behind each analytical approach and identifies the limitations of each *Selected Water Resources Abstracts* ,1989 Hydrologic Science Priorities for the U.S. Global Change Research Program National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Hydrologic Science, 1999-11-04 The availability of fresh water is potentially one of the most pervasive crises of the coming century Water related decisions will determine the future of major ecosystems the health of regional economies and the political stability of nations A vigorous program of research in hydrologic sciences can provide the basis for sound water management at local regional national and international levels The Committee on Hydrologic Science was established by the National Research Council in 1999 to identify priorities for hydrologic science that will ensure its vitality as a scientific discipline in service of societal needs This charge will be performed principally through a series of studies that provide scientific advice on the hydrologic aspects of national program and U S hydrologic contributions to international programs

This first report contains a preliminary assessment of the hydrologic science content of the U S Global Change Research Program USGCRP Because this is a short and focused report little effort is spent to reaffirm the established and successful elements of the USGCRP In fact the Committee generally endorses the findings of the National Research Council NRC report Global Environmental Change Research Pathways for the Next Decade NRC 1998a the so called Pathways report in this respect Instead the attention here is directed toward the most critical missing hydrologic science elements in the FY2000 USGCRP This brings the focus to the terrestrial component of the water cycle The integrative nature of terrestrial hydrology could significantly strengthen the USGCRP *Observing Global Climate Change* Kyrill Ya Kondratyev, Arthur P.
