Psychophysics Dorothea Jameson, L.M. Hurvich, 2012-12-06 This volume on Visual Psychophysics documents the current status of research aimed toward understanding the intricacies of the visual mechanism and its laws of operation in intact human perceivers As can be seen from the list of contributors the problems of vision engage the interest and experimental ingenuity of investigators from a variety of disciplines Thus we find authors affiliated with departments of biology medical and physiological physics ophthalmology physics physiology and anatomy psychology laboratories of neurophysiology medical clinics schools of optometry visual and other types of research institutes A continuing interplay between psychophysical studies and physiological work is everywhere evident As more information about the physiological basis of vision accumulates and new studies and analyses of receptor photochemistry and the neurophysiology of retina and brain appear psychophysical studies of the intact organism become more sharply focused sometimes more complex and often more specialized Technological advances have increased the variety and precision of the stimulus controls and advances in measurement techniques have reopened old problems and stimulated the investigation of new ones In some cases new concepts are being drawn in to help further our understanding of the laws by which the visual mechanism operates in other cases ideas enunciated long ago have been reevaluated developed more fully and reified in terms of converging evidence from both psychophysical experiments and unit recordings from visual cells **Quantum Enhancement of a 4 km Laser**

Interferometer Gravitational-Wave Detector Sheon S. Y. Chua, 2015-05-09 The work in this thesis was a part of the experiment of squeezed light injection into the LIGO interferometer The work first discusses the detailed design of the squeezed light source which would be used for the experiment The specific design is the doubly resonant traveling wave bow tie cavity squeezed light source with a new modified coherent sideband locking technique The thesis describes the properties affecting the squeezing magnitudes and offers solutions which improve the gain The first part also includes the detailed modeling of the back scattering noise of a traveling Optical Parametric Oscillator OPO In the second part the thesis discusses the LIGO Squeezed Light Injection Experiment undertaken to test squeezed light injection into a 4km interferometric gravitational wave detector The results show the first ever measurement of squeezing enhancement in a full scale suspended gravitational wave interferometer with Fabry Perot arms Further it showed that the presence of a squeezed light source added no additional noise in the low frequency band The result was the best sensitivity achieved by any gravitational wave detector The thesis is very well organized with the adequate theoretical background including basics of Quantum Optics Quantum noise pertaining to gravitational wave detectors in various configurations along with extensive referencing necessary for the experimental set up For any non experimental scientist this introduction is a very useful and enjoyable
