### **Solutions and Applications of Scattering, Propagation, Radiation and Emission of Electromagnetic Waves**

Ahmed Kishk, 2012-11-14 In this book a wide range of different topics related to analytical as well as numerical solutions of problems related to scattering propagation radiation and emission in different medium are discussed Design of several devices and their measurements aspects are introduced Topics related to microwave region as well as Terahertz and quasi optical region are considered Bi isotropic metamaterial in optical region is investigated Interesting numerical methods in frequency domain and time domain for scattering radiation forward as well as reverse problems and microwave imaging are summarized Therefore the book will satisfy different tastes for engineers interested for example in microwave engineering antennas and numerical methods

Development of Coherent Detector Technologies for Sub-Millimetre Wave Astronomy Observations Boon Kok Tan, 2015-09-15 The thesis describes the development of receiver technologies for sub millimetre astronomy instruments focusing on high performance coherent cryogenic detectors operating close to the superconductor gap frequency The mixer chip which comprises the SIS devices fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon On Insulator SOI technology This offered broadband IF and RF performance with fully integrated on chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block An important consequence of this design is that it can be extended to the supra THz region and making the fabrication of multi pixel heterodyne arrays feasible The extension of the operation of major telescopes such as ALMA APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping combined with high resolution of the submillimetre sky The technology described in this thesis makes a major contribution to this effort

*IEICE Transactions on Electronics*, 2005 Applications of Advanced Electromagnetics Guennadi A. Kouzaev, 2012-10-30 This text directed to the microwave engineers and Master and PhD students is on the use of electromagnetics to the development and

design of advanced integrated components distinguished by their extended field of applications The results of hundreds of authors scattered in numerous journals and conference proceedings are carefully reviewed and classed Several chapters are to refresh the knowledge of readers in advanced electromagnetics New techniques are represented by compact electromagnetic quantum equations which can be used in modeling of microwave quantum integrated circuits of future In addition a topological method to the boundary value problem analysis is considered with the results and examples One extended chapter is for the development and design of integrated components for extended bandwidth applications and the technology and electromagnetic issues of silicon integrated transmission lines transitions filters power dividers directional couplers etc are considered Novel prospective interconnects based on different physical effects are reviewed as well The ideas of topology is applicable to the electromagnetic signaling and computing when the vector field maps can carry discrete information and this area and the results in topological signaling obtained by different authors are analyzed including the recently designed predicate logic processor operating spatially represented signal units The book is rich of practical examples illustrations and references and useful for the specialists working at the edge of contemporary technology and electromagnetics

interpolation Finally the coupler with microstrip and CPW is designed Good coupling characteristics were achieved and verified with different simulation softwares like IE3D and HFSS
