Ways To Make Your Paper Look Longer:

Planning Your Research And How To Write It Abdul Aziz Nather, 2015-10-21 This book is a practical guide for residents and young researchers who are planning to embark on research. It details the significant planning one must first do including choosing a suitable experienced clinician as a supervisor, sourcing for a winning idea with significant clinical impact, performing a proper review of literature, defining clearly the objectives to be set and adopting the appropriate methodology. Statistical evaluation must be done from the start of the research to define adequate sample size and also for evaluation of the results. It also advises how one should draw upon relevant and appropriate conclusions from the results obtained. The ethics of research is also discussed. An all important factor in research is the procurement of research grants. Readers are guided how to write a proper research proposal to secure these much needed grants. Many research papers end up as presentations only in local or international conferences. An important additional objective of this book is to guide young researchers how to write their finished product as a publication in an important international refereed journal or as a thesis. Chapters have been specially written with tips for scientific writing, selecting the right journal, writing for an original article for a journal, a review article, a case report as well as for a thesis. Tips are also written on what reviewers of a journal look for in an article as well as what examiners look for in a thesis.

The Complete Guide to Graduate School Admission Patricia Keith-Spiegel, Michael W. Wiederman, 2000-03 Should I go to graduate school? How do I choose where to apply? Are my grades and accomplishments good enough to get in? Who should I ask to write recommendation letters for me and how should I approach these people? How do I write my personal statement? When will I hear my fate and how should I make my final decision? These are just a few of the many questions to which this well researched, thorough, and extremely user friendly book offers answers. Students who are contemplating graduate training in psychology, counseling, and related fields are often apprehensive and confused about applying to graduate school, but this book takes the guesswork and anxiety out of the process. The tone and features such as the Q & A format, timeline for application related tasks and activities, and special advice for special populations that made the first edition so successful, eliciting hundreds of thank you notes and e mail messages to the author, are just as evident in this new edition. The book has been thoroughly updated to include coverage of new topics such as use of the internet and e mail.

as well as changing trends in the professions The most obvious difference is that the book is now significantly shorter as a result of meticulous rewriting making it even easier to use There have been attempts since the publication of the first edition to copy the format of this book but none of the others have successfully duplicated the depth of research based advice and the supportive style that make this book the guide of choice for thousands of graduate school bound students and their advisors

Save the Earth Science Experiments Elizabeth Snoke Harris, 2008. Going green is a hot topic and a hot science fair project. Author and scientist Elizabeth Snoke Harris knows what impresses and she provides plenty of winning ideas along with step-by-step guidance to insure that the end result is a success. Show how to harness energy with windmills, make a biogas generator and create alternative fuels. Demonstrate green power with recycled paper, solar building, and compact fluorescent light bulbs. Test the ozone, be a garbage detective, and discuss how to reverse global warming. The importance of what children learn will go even beyond the science fair; they'll have the knowledge to understand what's happening to Planet Earth and the desire to do something eco-friendly every day.

Farmers' Guide, 1897. **Green Chemistry and Engineering** Anne E. Marteel-Parrish, Martin A. Abraham, 2013-11-11. Promotes a green approach to chemistry and chemical engineering for a sustainable planet. With this text as their guide, students will gain a new outlook on chemistry and engineering. The text fully covers introductory concepts in general organic, inorganic, and analytical chemistry, as well as biochemistry. At the same time, it integrates such concepts as greenhouse gas potential, alternative and renewable energy, solvent selection and recovery, and ecotoxicity. As a result, students learn how to design chemical products and processes that are sustainable and environmentally friendly. *Green Chemistry and Engineering* presents the green approach as an essential tool for tackling problems in chemistry. A novel feature of the text is its integration of introductory engineering concepts, making it easier for students to move from fundamental science to applications. Throughout this text, the authors integrate several features to help students understand and apply basic concepts in general chemistry as well as green chemistry, including comparisons of the environmental impact of traditional chemistry approaches with green chemistry approaches, analyses of chemical processes in the context of life cycle principles, demonstrating how chemistry fits within the complex supply chain, applications of green chemistry that are relevant to students' lives and professional aspirations, examples of successful green chemistry endeavors including Presidential Green Chemistry Challenge winners, case studies that encourage students to use their critical thinking skills to devise green

chemistry solutions Upon completing this text students will come to understand that chemistry is not antithetical to sustainability but rather with the application of green principles chemistry is the means to a sustainable planet
