problem solving

Sharon made three square patterns using 4 coins, 9 coins, and 16 coins. If she continues forming larger square patterns, how many coins will she need for each of the next three square patterns?

Understand We are given 4, 9, and 16 as the first three square numbers. We are asked to extend the sequence an additional three terms.

Plan We will find the pattern in the first three terms of the sequence, then use the pattern to extend the sequence an additional three terms.

Solve We see that the number of coins in each square can be found by multiplying the number of coins in each row by the number of rows: $2 \times 2 = 4$, $3 \times 3 = 9$, and $4 \times 4 = 16$. We use this rule to find the next three terms: $5 \times 5 = 25$, $6 \times 6 = 36$, and $7 \times 7 = 49$.

Check We found that Sharon needs 25, 36, and 49 coins to build each of the next three squares in the pattern. We can verify our answers by drawing pictures of each of the next three terms in the pattern and counting the coins.
