Computers in Art, Design and Animation John Lansdown, Rae Earnshaw, 1989-08-23 The collection of papers that makes up this book arises largely from the joint activities of two specialist groups of the British Computer Society namely the Displays Group and the Computer Arts Society Both these groups are now more than 20 years old and during the whole of this time have held regular separate meetings In recent years however the two groups have held a joint annual meeting at which presentations of mutual interest have been given and it is mainly from the last two of these that the present papers have been drawn They fall naturally into four classes visualisation art design and animation although as in all such cases the boundaries between the classes are fuzzy and overlap inevitably occurs Visualisation The graphic potential of computers has been recognised almost since computing was first used but it is only comparatively recently that their possibilities as devices for the visualisation of complex and largely abstract phenomena has begun to be more fully appreciated Some workers stress the need to be able to model photographic reality in order to assist in this task They look to better algorithms and more resolution to achieve this end Others Alan Mackay for instance suggest that it is not just a matter of providing more and more pixels It is a matter of providing congenial clues which employ to the greatest extent what we already know

Comics and Narration Thierry Groensteen, 2013-02-18 This book is the follow up to Thierry Groensteen s groundbreaking *The System of Comics* in which the leading French language comics theorist set out to investigate how the medium functions introducing the principle of iconic solidarity and showing the systems that underlie the articulation between panels at three levels page layout linear sequence and nonsequential links woven through the comic book as a whole He now develops that analysis further using examples from a very wide range of comics including the work of American artists such as Chris Ware and Robert Crumb He tests out his theoretical framework by bringing it up against cases that challenge it such as abstract comics digital comics and shojo manga and offers insightful reflections on these innovations In addition he includes lengthy chapters on three areas not covered in the first book First he explores the role of the narrator both verbal and visual and the particular issues that arise out of narration in autobiographical comics Second Groensteen tackles the question of rhythm in comics and the skill demonstrated by virtuoso artists in intertwining different rhythms over and above the basic beat provided by the discontinuity of the panels And third he resets the relationship of comics to contemporary art conditioned by cultural history and aesthetic traditions but evolving recently as comics artists move onto avant garde terrain
