Thinkpad Hardware Maintenance Manual:

Rootkits and Bootkits Alex Matrosov, Eugene Rodionov, Sergey Bratus, 2019-05-07 Rootkits and Bootkits will teach you how to understand and counter sophisticated advanced threats buried deep in a machine's boot process or UEFI firmware. With the aid of numerous case studies and professional research from three of the world's leading security experts you'll trace malware development over time from rootkits like TDL3 to present day UEFI implants and examine how they infect a system, persist through reboot and evade security software. As you inspect and dissect real malware you'll learn how Windows boots including 32 bit, 64 bit and UEFI mode and where to find vulnerabilities. The details of boot process security mechanisms like Secure Boot including an overview of Virtual Secure Mode (VSM) and Device Guard. Reverse engineering and forensic techniques for analyzing real malware including bootkits like Rovnix, Carberp, Gapz, TDL4 and the infamous rootkits TDL3 and Festi. How to perform static and dynamic analysis using emulation and tools like Bochs and IDA Pro. How to better understand the delivery stage of threats against BIOS and UEFI firmware in order to create detection capabilities. How to use virtualization tools like VMware Workstation to reverse engineer bootkits and the Intel Chipsec tool to dig into forensic analysis. Cybercrime syndicates and malicious actors will continue to write ever more persistent and covert attacks but the game is not lost. Explore the cutting edge of malware analysis with Rootkits and Bootkits. Covers boot processes for Windows 32 bit and 64 bit operating systems. **ThinkPad** Galaxy Lee, 2021-11-07 ThinkPad Yamato Lab ThinkPad ThinkPad BIOS Yamato Lab ThinkPad ThinkPad ThinkPad ThinkPad 2018 2020 ThinkPad Power-Aware Computer Systems Babak Falsafi, T.N. Vijaykumar, 2005-12-24 Welcome to the proceedings of the Power Aware Computer Systems PACS 2004 workshop held in conjunction with the 37th Annual International Symposium on Microarchitecture MICRO 37. The continued increase of power and energy dissipation in computer systems has resulted in higher cost, lower reliability and reduced battery life in portable systems. Consequently power and energy have become first class constraints at all layers of modern computer systems. PACS 2004 is the fourth workshop in its series to explore techniques to reduce power and energy at all levels of computer systems and brings together academic and industry researchers. The papers in these proceedings span a wide spectrum of areas in power aware systems. We have grouped the papers into the following categories: 1 microarchitecture and circuit level techniques, 2 power aware memory and interconnect systems and 3 frequency and voltage scaling techniques. The first paper in the microarchitecture group proposes banking and write back latching to reduce register leakage power. The second paper in this group optimizes both delay and power of the issue queue by packing two instructions in each issue queue entry and by memorizing upper order bits of the wake up tag. The third paper proposes bit slicing the datapath to exploit narrow width operations and the last paper proposes to migrate application threads from one core to another in a multi core chip to address thermal problems.
