Process Dynamics and Control Dale E. Seborg, Duncan A. Mellichamp, Thomas F. Edgar, Francis J. Doyle, III, 2010-04-12

This third edition provides chemical engineers with process control techniques that are used in practice while offering detailed mathematical analysis. Numerous examples and simulations are used to illustrate key theoretical concepts. New exercises are integrated throughout several chapters to reinforce concepts. Up to date information is also included on real time optimization and model predictive control to highlight the significant impact these techniques have on industrial practice. And chemical engineers will find two new chapters on biosystems control to gain the latest perspective in the field.

Real-time Iterative Learning Control Jian-Xin Xu, Sanjib K. Panda, Tong Heng Lee, 2008-12-12

Real time Iterative Learning Control demonstrates how the latest advances in iterative learning control ILC can be applied to a number of plants widely encountered in practice. The book gives a systematic introduction to real time ILC design and source of illustrative case studies for ILC problem solving. The fundamental concepts, schematics, configurations and generic guidelines for ILC design and implementation are enhanced by a well selected group of representative simple and easy to learn example applications. Key issues in ILC design and implementation in linear and nonlinear plants pervading mechatronics and batch processes are addressed in particular. ILC design in the continuous and discrete time domains, design in the frequency and time domains, design with problem specific performance objectives including robustness and optimality, design in a modular approach by integration with other control techniques and design by means of classical tools based on Bode plots and state space.

Dynamic Modeling and Predictive Control in Solid Oxide Fuel Cells Biao Huang, Yutong Qi, A. K. M. Monjur Murshed, 2013-01-25. The high temperature solid oxide fuel cell SOFC is identified as one of the leading fuel cell technology contenders to capture the energy market in years to come. However, in order to operate as an efficient energy generating system, the SOFC requires an appropriate control system which in turn requires a detailed modelling of process dynamics. Introducing state of the art dynamic modelling, estimation and control of SOFC systems, this book presents original modelling methods and brand new results as developed by the authors. With comprehensive coverage and bringing together many aspects of SOFC technology, it considers dynamic modelling through first principles and data based approaches and considers all aspects of control including modelling, system identification, state estimation, conventional and advanced control. Key features: Discusses both planar and tubular SOFC and detailed and simplified dynamic modelling for SOFC. Systematically describes single model and distributed models from cell level to system level. Provides parameters for all models developed for easy reference and reproducing of the results. All theories are illustrated through vivid fuel cell application examples such as state of the art unscented Kalman filter model, predictive control and system identification techniques to SOFC systems. The tutorial approach makes it perfect for learning the fundamentals of chemical engineering system identification, state estimation and process control. It is suitable for graduate students in chemical, mechanical, power and electrical engineering.

especially those in process control process systems engineering control systems or fuel cells It will also aid researchers who need a reminder of the basics as well as an overview of current techniques in the dynamic modelling and control of SOFC

A Real-Time Approach to Process Control William Y. Svrcek, Donald P. Mahoney, Brent R. Young, 2013-12-05. With resources at a premium and ecological concerns paramount, the need for clean, efficient, and low-cost processes is one of the most critical challenges facing chemical engineers. The ability to control these processes, optimizing one, two, or several variables, has the potential to make more substantial savings in time, money, and resources than any other single factor. Building on the success of the previous editions, this new third edition of *A Real-Time Approach to Process Control* employs both real industry practice and process control education without the use of complex or highly mathematical techniques, providing a more practical and applied approach. Updated throughout, this edition includes a brand new chapter on Model Predictive Control (MPC). Now includes wireless and web-based technologies. Covers bio-related systems. Details the new multivariable control measure developed by the authors. Includes PowerPoint slides and solutions to Workshop problems on the accompanying website: <http://www.wiley.com/go/svrcek>. Real-Time 3e. From the reviews of previous editions: "Would appeal to practising engineers due to its hands-on feel for the subject matter. But more importantly, the authors present these concepts as fundamentals of chemical engineering in a way that is consistent with how professors teach at the universities." Chemical Engineering Process CEP. The book has been beautifully crafted. Engineering Subject Centre.
