Kaufman, 2009 Bear Lake is located 100 km northeast of Salt Lake City and lies along the course of the Bear River the largest river in the Great Basin The lake which is one of the oldest extant lakes in North America occupies a tectonically active half graben and contains hundreds of meters of Quaternary sediment This volume is the culmination of more than a decade of

coordinated investigations aimed at a holistic understanding of this long lived alkaline lake in the semiarid western United States Its 14 chapters with 20 contributing authors contain geological mineralogical geochemical paleontological and limnological studies extending from the drainage basin to the depocenter The studies span both modern and paleoenvironments including a 120 m long sediment core that captures a continuous record of the last two glacial interglacial cycles

Nature-Based Solutions for Urban Water Management Junguo Liu,Zhan Tian,Qinhua Ye,Laixiang Sun,Shiqiang Wu,2024-02-23 Water plays an essential role in the development and functioning of a city but could also be a key risk factor for urban pluvial flooding which may occur more frequently in the context of future climate change The traditional means of flood risk management relied heavily on engineering measures or the use of gray infrastructure Recently there has been a call to integrate nature based solutions NBS which make use of natural processes and ecosystem services with conventional engineering approaches NBS infrastructures and designs pay great attention to ecosystem services considerations in assessing their induced hydrological processes as well as in managing the stormwater and mitigating urban flood and droughts Nevertheless compared with grey infrastructure larger space could be demanded for NBS while the buffer effect for NBS in extremes events is still uncertain for evaluation

Growth, Dissolution and Pattern Formation in Geosystems B. Jamtveit,P.

Meakin,2013-03-09 This book is the proceedings of the 11th Kongsberg seminar held at the Norwegian Mining Museum in the city of Kongsberg about 70 km Southwest of Oslo The Kongs berg district is known for numerous Permian vein deposits rich in native silver Mining activity in the area lasted for more than 300 years finally ceasing in 1957 The first eight

Kongsberg seminars organized by professor Arne Bjørlykke now director of the Norwegian Geological Survey were focused on ore forming processes. These seminars have always been a meeting point for people with a variety of geological backgrounds. Since 1995 the Kongsberg seminars have focussed on geological processes rather than on specific geological systems and the selection of invited speakers has been strongly influenced by their interest in the dynamics of geological systems. In 1995 and 1996 various aspects of fluid flow and transport in rocks were emphasized. The first Kongsberg proceedings of the 1995 seminar published by Chapman and Hall. Jamtveit and Yardley 1997 contained 17 chapters dealing with a wide range of topics from field based studies of the effects of fluid flow in sedimentary and metamorphic rocks to computer simulations of flow in complex porous and fractured media. In 1997 the focus was changed to growth and dissolution processes in geological systems.

The first part of the book investigates the processes involved in forming glacier ice, the nature of glacier climate relationships, the mechanisms of glacier flow and the interactions of glaciers with other natural systems such as rivers, lakes and oceans. In the second part the emphasis moves to landforms and sediment, the interpretation of the earth's glacial legacy and the reconstruction of glacial depositional environments and palaeoglaciology.

Vaughan ,R.A. Wogelius, 2013-02-06 In a sense all mineralogy is environmental mineralogy However the term environmental has come to be employed particularly in combination with terms such as science issue or problem to refer to those systems at or near the surface of the Earth where the geosphere comes into contact with the hydrosphere atmosphere and biosphere This is of course the environment upon which the human race depends for survival and hence is now sometimes referred to as the critical zone Those systems containing minerals that constitute the most important or key environments are considered here soils modern sediments atmospheric aerosols and the interior or exterior parts of certain micro and macro organisms Particularly important are the roles that minerals play in processes that act over time to control or influence the environment at various scales of observation Both pure systems and those contaminated as a result of human activity are considered The objectives for this volume are to help to define the subject of environmental mineralogy and to provide an initial source of information both for mineralogists and other scientists who wish to understand or work in this field It was hoped that it might also provide a text for use by those teaching courses in the subject at advanced undergraduate or graduate student level *Who Speaks for the Climate?* Maxwell T.
