Australian cities have traditionally relied for their water on a predict and provide philosophy that gives primacy to big engineering solutions In more recent years privatised water authorities seeking to maximise consumption and profits have reinforced the emphasis on increasing supply Now the cities must cope with the stresses these policies have imposed on the eco systems from which they harvest water into which they discharge wastes and on which they are located Residents are having to pay more for their water while the cities themselves are becoming less sustainable Must we build more dams and desalination plants or should we be managing the demand for urban water more prudently This book explores the demand for urban water and how it has changed in response to shifting social mores over the past century It explains how demand for centralised provision of water might be reshaped to enable the cities to better cope with expected changes in supply as our climate changes And it discusses the implications of property rights in water for proposals to privatise water services
