

## Study Guide for Exam #2 in Psychology 230

### 1. Perceptual Development

- a. **Describe the methods used to study perception in infants. What do these methods tell us?**
  - Preference method: two objects are presented simultaneously, and we record how long an infant attends (looks @) each one, shows that infants can distinguish between stimuli
  - Habituation method: a stimulus becomes so familiar/boring that infants stop showing any response to it (aka: habituates), shows ability to distinguish old vs. new
  - Evoked potentials: present with a stimulus and record brain waves, brain waves are used to measure preference/ dishabituation and habituation at any given millisecond
- b. **What kinds of patterns can newborns see? When can they see patterns like adults?**
  - Infants age 2 mo.+ can discriminate patterns similar to adults (even highly complex ones)
  - Infants 0-2 mo. can only discriminate moderately complex patterns, curvilinear rather than linear
- c. **What preferences for smell and taste do infants have? Be able to tell by examples what an infant may perceive with smell and taste.**
  - Based on facial expressions, newborns prefer food flavorings (vanilla, strawberry) to stronger smells (fish, rotten eggs)
  - Newborns orient toward breast odor (eventually infants prefer odor of mother's breast to the odor of other lactating females)
  - Newborns suck more vigorously when fluids are sweetened.
  - Facial expression & muscular reactions differ for sweet and sour
    - lick lips and suck to sweet flavors
    - make "yuck" face to bitter and sour tastes
- d. **What are the reactions at different ages to the visual cliff? Why do babies react differently at different ages?**
  - Eleanor Gibson invented the visual cliff to study depth perception
  - Put 7-8 mo. baby in middle of cliff, put mother on deep or shallow side. Have mother call baby.
  - Findings: infants avoided deep side — CAN perceive depth
  - 
  - Later research by Bertenthal
  - Younger than 7-8 mo. (pre-locomotive) infants were placed on the visual cliff
  - Findings: decrease in heart rate (shows interest, not fear)
    - FEAR of depth develops through experience with self-locomotion (infants with walker experience show more avoidance to deep side than those without)
- e. **What is the primary characteristic of perceptual development in childhood and adolescence, as discussed in class?**
  - General trend: Information processing is less perceptually dominated as we get older
- f. **What did The Cat in the Hat study suggest about auditory perception in infants, as discussed in class?**
  - Decasper and Spence found that fetuses can hear!  
(mothers read "The Cat in the Hat" during the 9<sup>th</sup> mo. of pregnancy. After birth, babies sucked more to hear "The Cat in the Hat" than for other books)
- g. **How does perceptual development change as we get older in all domains?**
  - Increases in sensory thresholds — more energy is needed to detect a stimulus (sight, sound, smell)
