The Shape Of Sand:

Aeolian Sand and Sand Dunes ,2008-11-14 It is more than half a century since the publication of R A Bagnold s classic book *The physics of blown sand and desert dunes* and it is a tribute to the quality of Bagnold s work that many of the fundamental principles which he developed main valid today His book continues to be essential reading for any serious s dent of aeolian processes However the past two decades have seen an explosion in the scale of research dealing with aeolian transport processes sediments and landforms Some of this work has been summarized in review papers and edited conference proceedings but this book provides the rst attempt to review the whole eld of aeolian sand research Inevitably it has not been possible to cover all pects in equal depth and the balance of included material naturally re ects the thors own interests to a signi cant degree However our aim has been to provide as broad a perspective as possible and to provide an entry point to an extensive mul disciplinary scienti c literature some of which has not been given the attention it deserves in earlier textbooks and review papers Many examples are drawn from existing published work but the book also makes extensive use of our own research in the Middle East Australia Europe and North America The book has been written principally for use by advanced undergraduates po graduates and more senior research workers in geomorphology and sedimentology

Sand and Sandstone F. J. Pettijohn,Paul E. Potter,Raymond Siever,1987-05-20 The first edition appeared fourteen years ago Since then there have been significant advances in our science that warrant an updating and revision of *Sand and Sandstone* The main framework of the first edition has been retained so that the reader can begin with the mineralogy and textural properties of sands and sandstones progress through their organization and classification and their study as a body of rock to consideration of their origin prove nance transportation deposition and lithification and finally to their place in the stratigraphic column and the basin The last decade has seen the rise of facies analysis based on a closer look at the stratigraphic record and the recognition of characteristic bed ding sequences that are the signatures of some geologic process such as a prograding shallow water delta or the migration of a point bar on an alluvial floodplain The environment of sand deposition is more closely determined by its place in such depositional systems than by criteria based on textural characteristics the fingerprint approach Our revi sion reflects this change in thinking As in the geological sciences as a whole the concept of plate tectonics has required a rethinking of our older ideas about the origin and accumu lation of sediments especially the nature of the sedimentary basins
