Kóczy,2023-12-15 This book is considered as a monograph but also as a potential textbook for graduate students focusing on the application of FCMs for modelling and analysing the behaviour of multicomponent systems In the last two decades no monograph or textbook has been published on the topic **Fuzzy Cognitive Maps FCM** so this new book is definitely filling a gap in the literature of computational intelligence The book is built up didactically the novel results in the field being presented in the way of starting with two real life case studies one in the area of waste management while the other one in modelling bank management systems In both cases the book starts with explaining the applied problem and then presenting how the model construction is done and what problems emerge when attempts are made for applying directly earlier results on FCM modelling In the first case study the problem of the oversimplification leads to inadequacy of the model and then it is shown how new much finer models can be built up based on expert domain knowledge Then the new problem of losing transparency and interpretability emerges and as a solution a new algorithm family is proposed that reduces FCMs to fewer components while preserving the essential characteristics of the original model The second case study raises the problems of stability and sensitivity of FCMs especially considering that expert knowledge is often uncertain and subjective The new results summarised in the book target the questions of how to ascertain whether an FCM is converging to one or several fixed point attractors whether there is a bifurcation when parameters are changing etc Both problems deal with the ultimate question whether the system modelled is stable and sustainable *Virginia Woolf* Dr Lorraine Sim,2013-04-28 In her timely contribution to revisionist approaches in modernist studies Lorraine Sim offers a

reading of Virginia Woolf's conception of ordinary experience as revealed in her fiction and nonfiction. Contending that Woolf's representations of everyday life both acknowledge and provide a challenge to characterizations of daily life as mundane, Sim shows how Woolf explores the potential of everyday experience as a site of personal meaning, social understanding, and ethical value. Sim's argument develops through readings of Woolf's literary representations of a subject's engagement with ordinary things like a mark on the wall, a table, or colour. Woolf's accounts of experiences that are both common and extraordinary, such as physical pain or epiphanic moments of being, and Woolf's analysis of the effect of new technologies, for example motor cars and the cinema, on contemporary understandings of the external world. Throughout, Sim places Woolf's views in the context of the philosophical and lay accounts of ordinary experience that dominated the cultural thought of her time. These include British Empiricism, Romanticism, Platonic thought, and Post Impressionism. In addition to drawing on the major novels, particularly *The Voyage Out*, *Mrs Dalloway*, and *To the Lighthouse*, Sim focuses close attention on short stories such as *The Mark on the Wall*, *Solid Objects*, and *Blue*, nonfiction works including *On Being Ill*, *Evening over Sussex*, *Reflections in a Motor car*, and *A Sketch of the Past*, and Woolf's diaries. Sim concludes with an account of Woolf's ontology of the ordinary, which illuminates the role of the everyday in Woolf's ethics.
