Vivo 40 Ventilator Manual:

Manual of Neonatal Respiratory Care Steven M. Donn, Mark C. Mammel, Anton H.L.C. van Kaam, 2022-05-09 Respiratory care is the largest overall component of neonatal intensive care and the fifth edition of the Manual of Neonatal Respiratory Care is the leading bedside guide for all aspects of respiratory care in the neonatal intensive care unit. Its easy-to-read outline format is simple yet comprehensive and covers all aspects of lung disease in the newborn infant including embryology, principles of mechanical ventilation, procedures and techniques, monitoring devices, adjunctive therapies, management of respiratory illness, complications, outcomes, and related issues. The latest edition includes fully revised and updated information, coverage on new equipment and devices, and an expanded authorship to enhance its international appeal. The new edition also features two new co-editors, Dr. Mark Mammel and Dr. Anton Van Kaam, internationally recognized experts in the field who bring a fresh perspective to the manual. Divided into sixteen sections, the book begins with a section on lung development and maldevelopment, specifically covering the development of the respiratory system, malformations, deformations, disorders of the neonatal airway, and developmental lung anomalies. The second section reviews the principles of mechanical ventilation, with coverage on such topics as spontaneous breathing, oxygen therapy, oxygen toxicity, pulmonary mechanics, and ventilator parameters. The third section of the manual outlines procedures and techniques, including neonatal resuscitation, laryngoscopy, and endotracheal intubation and tracheostomy. The following section dives into the monitoring of the ventilated patient, specifically focusing on continuous monitoring techniques, clinical controversies in pulse oximetry and echocardiography. The next section spotlights noninvasive ventilatory techniques, such as nasal interfaces, humidified high flow nasal cannula therapy, and sustained inflation. The sixth section of the manual focuses on ventilatory modes and modalities, with coverage on intermittent mandatory ventilation, pressure support ventilation, and pressure control ventilation. The following section segues into high frequency ventilation, reviewing general concepts, high frequency jet ventilation, and high frequency oscillatory ventilation. The eighth section centers around commonly used neonatal ventilators, such as the Draeger VN500 ventilator, the AVEA ventilator, and the Twinstream ventilator. The ninth section reviews adjunctive therapies, including hemodynamic support, nutritional support, the use of sedation and analgesia, inhaled nitric oxide therapy, and ECMO. The tenth section shifts gears to spotlight the management of common neonatal respiratory diseases, with chapters on mechanisms of respiratory failure, tissue hypoxia, respiratory distress syndrome, persistent pulmonary hypertension, and pulmonary hypoplasia, among others. Section eleven reviews the etiology, pathogenesis, and management of bronchopulmonary dysplasia, as well as the long-term outcome of newborns with this chronic lung disease. The next section presents complications associated with mechanical ventilation, such as thoracic air leaks, neonatal pulmonary hemorrhage, and neurologic complications. The following two sections spotlight ethical, legal, and other considerations, among them nursing care of the ventilated infant, long-term ventilator dependency, home ventilation, and withdrawal of ventilatory

support and medical liability and risk management The fifteenth section focuses on research and literature with coverage on interpreting medical literature data collection and assessment of respiratory outcomes and contemporary classics in neonatal respiratory care The final section presents ventilatory case studies The text also features over 300 high yield radiographic images figures tables and algorithms

Optimización de la terapia con lopinavir/ritonavir en pacientes infectados por el VIH LÓPEZ ASPIROZ,

Elena, 2015-06-01 El lopinavir ritonavir LPV r ha demostrado eficacia virológica e inmunológica en el tratamiento antirretroviral combinado de pacientes infectados por el VIH tanto en naïve como pretratados. Además presenta una alta barrera genética al desarrollo de resistencias y su perfil de tolerancia es aceptable aunque son frecuentes alteraciones gastrointestinales y del perfil lipídico. Sin embargo existe una elevada variabilidad interindividual en el comportamiento farmacocinético PK, la respuesta inmunovirológica y la presencia de efectos adversos tras la administración de la dosis estándar de LPV r de 400/100 mg cada 12 horas. Por ello para optimizar su utilización en terapéutica existen diferentes estrategias en la práctica clínica como la monitorización de niveles de fármacos TDM y la información farmacogenética PG. El estudio de asociación genética sobre la influencia de 290 polimorfismos de un único nucleótido SNPs en genes candidatos sobre la PK, la eficacia y la toxicidad de LPV r en 109 pacientes infectados por VIH mostró el mayor grado de significación estadística para los SNPs del gen DRD3 y la PK de LPV r. El modelo PK PG poblacional desarrollado y validado para LPV r en pacientes infectados por el VIH utilizando la estrategia de efectos mixtos con el programa NONMEM identifica los SNPs CYP3A4_1461ins, CYP3A rs6945984 y CYP3A5 rs28371764 como covariables PG con probable influencia en la cinética de disposición de este fármaco. No obstante se requieren estudios complementarios que confirmen estos resultados debido a la baja representatividad en la población de estudio de algunas de las covariables genéticas analizadas. La implementación del modelo PK PG poblacional de LPV r propuesto en el programa de farmacocinética clínica PKS ha permitido estimar con fiabilidad los parámetros PK de los pacientes monitorizados utilizando métodos Bayesianos y de acuerdo con ellos y con el control clínico de la enfermedad ajustar la posología de forma individualizada.
