

You now created a new project. You might get all scared by Visual C#'s interface because it is very crowded and you don't know what most of the controls do. Let's take a look at the interface for a bit: the first thing that pop's into your eyes is the form right in the middle. It is an empty form and what you have to do is to take controls from the "Toolbox", the panel from the left, and put them on it.

You can use different types of controls in the "Toolbox" window: windows, containers, progress bars, and you can add all of them and other items to your form. Everything depending on your needs and, of course, what you want to do.

As the title says, here you can "design" (configure) what you want to create. When you create a new project, you automatically create a new form. You can create as many forms as you want. You can also create a new application called "Calculator". When this is what you actually did, you "Calculator" is an empty project inside the "Calculator" solution. From now on, we will use a calling for "Calculator" to create the empty project inside the solution. You will have all the everything in the solution explorer window.

Step 1: Designing the form

When you create a new empty solution application, when it will be in the solution explorer, you will see a new window created for the user. To design, we will use this new window. You can also see the solution explorer for the user window to add and link the new controls. We will also use the solution explorer for the user window to add controls to it.

To do all this, click on the "Toolbox" window in the window, and then click on your form. As you can see, a new form is created in the user form. Repeat this step again and create new forms and forms. All the work is done in the user window.
