

FUEL MANAGEMENT GAUGE (Input for MPG from GPS or Multifunction Speedometer)

The fuel management gauge can receive data from either a GPS or the multifunction speedometer. It cannot be hooked to both. This option has been available since 1998. The same signal lead part #6Y5-87122-S0-00 is used for either application. If you are using input from the multifunction speedometer, no modification is required to the lead. If you are using the GPS for the input signal, modification will be required which is explained below.

Indication	Gph (gallons)	
+3%	8.88	Speedometer
+2%	8.88	GPS
+1%	8.88	2% (Stars)
0%	8.88	
-1%	8.88	
-2%	8.88	
-3%	8.88	
-4%	8.88	

Modification Procedure

1. Cut off three prong connector.
2. Remove the black plug and install it on the speedometer to plug the hole in the back of the gauge.
3. The white wire is the signal lead which needs to be connected to the NMEA 0183 output lead of the GPS unit.

NOTE: All GPS units utilize different harnesses, terminals and color codes on the output signal.

Always connect the white wire to whatever the GPS manufacturer recommends. *Do Not Use Red and Black wires.*

Try and keep the wire length to a minimum. Long lengths could affect the operation of the system.

If the cable length needs extending, use coaxial cable.
