

8-126. The two semicircles used in the construction of an aircraft fuselage are joined together using a 10° half-strength weld. Determine the average normal and average shear stress on the plane of each weld. Assume each vertical plate supports a horizontal force of 400 kN.

$$F_1 = 400 \text{ kN} \quad 10^\circ = \theta_1 \quad F_2 = 400 \text{ kN}$$

$$400 \cos 10^\circ = F' = F_1 \quad F' = 394.44 \text{ kN}$$

$$A' = \frac{1.5(1.5)}{\cos 10^\circ} = 2.267$$

$$\sigma = \frac{F'}{A'} = \frac{394.44}{2.267} = 174.1 \text{ psi}$$

$$\tau = \frac{F'}{A'} = \frac{394.44}{2.267} = 174.1 \text{ psi}$$

8-126. If the block is subjected to the vertically applied force of 600 kN, determine the average normal stress in the material. Show the stress acting on a differential volume element of the material.

Ans.

$$\text{The gross cross-sectional area of the block is } A = 0.15(0.15) = 0.0225 \text{ m}^2$$

$$\sigma_{avg} = \frac{P}{A} = \frac{600 \text{ kN}}{0.0225} = 26.67 \text{ MPa} = 26.7 \text{ MPa}$$

The average normal stress distribution over the cross-section of the block and the state of stress of a point in the block represented by a differential volume element are shown in Fig. a.

Sidebottom, 1993-03-01 Updated and reorganized each of the topics is thoroughly developed from fundamental principles The assumptions applicability and limitations of the methods are clearly discussed Includes such advanced subjects as plasticity creep fracture mechanics flat plates high cycle fatigue contact stresses and finite elements Due to the widespread use of the metric system SI units are used throughout Contains a generous selection of illustrative examples and problems Solutions Manual to Accompany Mechanics of Materials Daryl L. finite element method and Moire interferometry were research topics in mechanics but today these techniques are used routinely in engineering design and analysis Wood and metal were the preferred materials in engineering design but today machine components and structures may be made of plastics ceramics polymer composites and metal matrix composites Mechanics of materials was primarily used for structural analysis in aerospace civil and mechanical engineering but today mechanics of materials is used in electronic packaging medical implants the explanation of geological movements and the manufacturing of wood products to meet specific strength requirements Though the principles in mechanics of materials have not changed in the past hundred years the presentation of these principles must evolve to provide the students with a foundation that will permit them to readily incorporate the growing body of knowledge as an extension of the fundamental principles and not as something added on and vaguely connected to what they already know This has been my primary motivation for writing the textbook Learning the course content is not an end in itself but a part of an educational process Some of the serendipitous development of theories in mechanics of materials the mistakes made and the controversies that arose from these mistakes are all part of the human drama that has many educational values including learning from others mistakes the struggle in understanding difficult concepts and the fruits of perseverance The connection of ideas and concepts discussed in a chapter to advanced modern techniques also has educational value including continuity and integration of subject material a starting reference point in a literature search an alternative perspective and an application of the subject material Triumphs and tragedies in engineering that arose from proper or improper applications of mechanics of materials concepts have emotive impact that helps in learning and retention of concepts according to neuroscience and education research Incorporating educational values from history advanced topics and mechanics of materials in action or inaction without distracting the student from the central ideas and concepts is an important complementary objective of the textbook
