Moody's International Manual ,1993 **The Municipal Buyers' Guide** ,1972 **Guidelines for Mastering the Properties of Molecular Sieves** Denise Barthomeuf,E.G. Derouane,Wolfgang Hölderich,2013-03-08 Low dimensionality is a multifarious concept which applies to very diversified materials Thus examples of low dimensional systems are structures with one or several layers single lines or patterns of lines and small clusters isolated or dispersed in solid systems Such low dimensional features can be produced in a wide variety of materials systems with a broad spectrum of scientific and practical interests These features in turn induce specific properties and particularly specific transport properties In the case of zeolites low dimensionality appears in the network of small diameter pores of molecular size extending in one two or three dimensions that these solids exhibit as a characteristic feature and which explains the term of molecular sieves currently used to name these materials Indeed a large number of industrial processes for separation of gases and liquids and for catalysis are based upon the use of this low dimensional feature in zeolites For instance zeolites constitute the first class of catalysts employed all over the world Because of the peculiarity and flexibility of their structure and composition zeolites can be adapted to suit many specific and diversified applications For this reason zeolites are presently the object of a large and fast growing interest among chemists and chemical engineers Manual of Renal Micropuncture Vittorio E.
