G. Dietz,Hans B. F. Mulder,2025-05-05 This textbook explains the fundamentals of Enterprise Design It emphasizes two separations of concerns when re designing enterprises to keep the work intellectually manageable The first one is between function and construction thus between the enterprise business and the enterprise organisation The second one is between the essential model of the organisation the ontology of the enterprise and the implementation model With these two intellectual tools it is possible to conceive and put into effect any change in a manageable and responsible way To this end the book is divided into three parts Introduction Theories and Applications Part I contains the three introductory chapters In chapter 1 the reader is introduced to the discipline of Enterprise Engineering in which a design oriented view is taken toward organisations Chapter 2 discusses the often confused distinction between Enterprise Engineering and Enterprise Architecture and chapter 3 introduces Enterprise Design as one of the conceptual pillars of Enterprise Engineering Next Part II outlines the constituting theories of Enterprise Design Chapter 4 first provides an overview of all Enterprise Engineering theories and their position in a clarifying framework Then chapters 5 through 10 contain extended summaries of the theories that underly the notion of Enterprise Design Every chapter is divided in three parts foundations elaborations and discussions Eventually Part III is about the

application of the theories Chapter 11 contains an extensive description of the DEMO Design and Engineering Methodology for Organisations methodology specifically of the DAO method which guides the re design of enterprises In chapters 12 to 14 exercises are presented and discussed for the use of DEMO to the re design of enterprises These exercises in organisational redesign and digital transformation are particularly suited as course material In chapter 15 practical applications of DEMO in various industrial areas are reported In addition to a solid theoretical presentation of Enterprise Design this book also contains many exercises and examples of its practical application This combination makes the book perfectly suited for courses on Enterprise Design and Enterprise Engineering including DEMO as the principal methodology in Enterprise Engineering   *Management Information Systems* Charles S. Parker,Thomas Case,1993 This second edition has retained the clear easy to read writing style and managerial perspective of the previous edition The book employs two important themes throughout The strategy theme focuses readers on information systems goals and the action theme emphasizes the roles of people in information systems balancing technical issues with managerial issues   **Online Business Computer Applications** Alan L. Eliason,1991   *Application of Web Service Technologies on a B2B Communication Platform by Means of a Pattern and UML Based Software Development Process* Arnd Schnieders,2003-09-29 Inhaltsangabe Abstract There are about 230 000 establishments in the Spanish hotel restaurant and catering industry accounting for a turnover of about 15 6 thousand million euros All of them sell food to private consumers On the other hand suppliers and traders supply the catering trade with food and beverage products Usually the different players in this food distribution network trade products by means of orders which are placed manually This is a process which can be enhanced through the application of computer and Internet technology A project lately also supported by the Spanish government is supposed to fill this gap This project is called Catanet and has been established three years ago Actually the Catanet platform is used by more than 100 customers amongst them very important industry players like Lauren Films Pepsi Unilever and Nestle Some of them will carry out a significant part of their overall food orders by the Catanet platform which corresponds to a turnover volume of many million euros In the former version of the Catanet platform clients had to apply a web page based interface in order to use the Catanet services As this approach prohibited the full exploitation of the benefits the use of computer assistance provides e g human participation still constitutes an inevitable and crucial part of the transaction the interaction is completely asynchronous an additional level is being added to the Catanet platform eliminating these shortcomings During the time of this work the number of Catanet customers has grown explosively increasing also the diversity of the customer s computer systems Additionally new subprojects could be launched due to the acquisition of a government grant These encompassed among others new value added services demanded by the customers like an instant messaging module and a module for the automatic update of the local product catalogue The characteristics of the IT infrastructure of the new customers which will carry out transactions with a serious turnover via the Catanet platform and the necessity to integrate the new subprojects

required an adaptation of the design of the platform prototype which had been developed by this time and which is described in this work Within this context the decision has been done to use NET Framework based programs on the customer side instead of Java which had been used so far The reasons for this were besides the easier integration with the IT
