

Please note the following guidelines when selecting and locating the AIS VHF antenna:

- The VHF antenna should be located as high as possible and positioned as far from other antennas as possible.
- The VHF antenna should have omnidirectional vertical polarisation.
- Where possible the VHF antenna should be installed at least 3m (10ft) away from other transmitting radio, satellite and RADAR antennas.
- Ideally the AIS VHF antenna should be mounted directly above or below the ship's primary VHF radiotelephone antenna, with no horizontal separation and with a minimum of 2m vertical separation. If it is located on the same horizontal level as other antennas, the distance apart should be at least 10m. Refer to Figure 39 for further guidance.
- The VHF antenna cable should be kept as short as possible to minimise signal loss. High quality, low loss coaxial cable appropriate to the installation location should be used.
- The VHF antenna cable should be terminated in a PL-259 co-axial connector for connection to the AIS transceiver.
- Any outdoor installed connectors in the antenna cables should be waterproof by design.
- Antenna cables should be installed in separate signal cable channels at least 10cm (4ins) away from power supply cables. Crossing of cables should be done at right angles and sharp bends in the antenna cables should be avoided.
- Connect the VHF antenna cable to the VHF connector on the AIS transceiver as shown in Figure 40.

Radar and ARPA Manual A. G. Bole, W. O. Dineley, 2016-01-29. Radar and ARPA Manual focuses on the theoretical and practical aspects of electronic navigation. The manual first discusses basic radar principles including principles of range and bearing measurements and picture orientation and presentation. The text then looks at the operational principles of radar systems. Function of units, aerial receiver and display principles, transmitter principles and siting of units on board ships are discussed. The book also describes target detection, Automatic Radar Plotting Aids, ARPA and operational controls of radar systems and then discusses radar plotting. Errors associated with the true motion presentation, accuracy and errors of manual plotting, radar plotting aids and regulations for preventing collisions at sea as applied to radar and ARPA are described. The book also underscores the accuracy and errors of ARPA. The test scenarios, errors generated in the radar installation, classification of ARPA error sources and errors in displayed data and interpretation are explained. The manual is a good source of information for readers wanting to study electronic navigation. Radar Set AN United States. War Department, 1945. *Instruction Book for Marine Radar Model MR-3 B*
