

## Monitoring of Safety Alarms

Navigation in the areas crowded with dangers to navigation requires permanent monitoring. With this aim in view, the ECDIS task implements functions for setting and monitoring safe navigation parameters on vector electronic charts.

Chart objects are identified by the ECDIS task as dangers to navigation by certain parameters. In the ECDIS task, such parameters are referred to as safety parameters and are set by the operator.

Open **Monitoring** panel by selecting the appropriate line of TASKS LIST menu on the **Control** panel.

The **Safety frame** group is intended for setting the size of the frame, which will be used for the chart data analysis and for the generation of the Antigrrounding alarms, Area alerts and Navigational alarms.
