Performance Computing HPC systems have gone through many changes during the past two decades in their architectural design to satisfy the increasingly large scale scientific computing demand. Accurate fast and scalable performance models and simulation tools are essential for evaluating alternative architecture design decisions for the massive scale computing systems. This conference recounts some of the influential work in modeling and simulation for HPC systems and applications, identifies some of the major challenges and outlines future research directions which we believe are critical to the HPC modeling and simulation community.

**Mathematical Problem Solving** Peter Liljedahl, Manuel Santos-Trigo, 2019-02-12

This book contributes to the field of mathematical problem solving by exploring current themes, trends, and research perspectives. It does so by addressing five broad and related dimensions: problem solving heuristics, problem solving and technology inquiry, and problem posing in mathematics education, assessment of and through problem solving, and the problem solving environment. Mathematical problem solving has long been recognized as an important aspect of mathematics teaching, mathematics and learning mathematics. It has influenced mathematics curricula around the world with calls for the teaching of problem solving as well as the teaching of mathematics through problem solving. And as such, it has been of interest to mathematics education researchers for as long as the field has existed. Research in this area has generally aimed at understanding and relating the processes involved in solving problems to students' development of mathematical knowledge and problem solving skills. The accumulated knowledge and field developments have included conceptual frameworks for characterizing learners' success in problem solving activities, cognitive, metacognitive, social, and affective analysis, curriculum proposals, and ways to promote problem solving approaches.
