Trial Maths 25 September 2014:

The Safety and Efficacy of Noninvasive Brain Stimulation in Development and Neurodevelopmental Disorders

Lindsay M. Oberman, Peter G. Enticott, 2015-12-03 Noninvasive brain stimulation including Transcranial Magnetic Stimulation TMS and Transcranial Current Brain Stimulation TCS can be used both experimentally and therapeutically. In the experimental domain TMS can be applied in single pulses to depolarize a small population of neurons in a targeted brain region. This protocol can be used for example to map cortical motor outputs, study central motor conduction time or evaluate the cortical silent period, a measure of intracortical inhibition, all of which are relevant to neurodevelopment. TMS can also be applied in pairs of pulses, paired pulse stimulation ppTMS, where two pulses are presented in rapid succession to study intracortical inhibition and facilitation. Trains of repeated TMS rTMS pulses can be applied at various stimulation frequencies and patterns to modulate local cortical excitability beyond the duration of the stimulation itself. Depending on the parameters of stimulation, the excitability can be either facilitated or suppressed. TCS including Transcranial Direct Current Stimulation tDCS, alternating current tACS, and random noise current stimulation tRNS also have the potential to modulate cortical excitability and have also been used to study and modulate cortical activity in healthy and patient populations. The after effects of rTMS and TCS are thought to be related to changes in efficacy in either the positive or negative direction of synaptic connections of the neurons being stimulated, thus these techniques have been used to study and modulate cortical plasticity mechanisms in a number of populations. Recently, researchers have begun to apply these techniques to the study of neurodevelopmental mechanisms as well as the pathophysiology and development of novel treatments for neurodevelopmental disorders. Though there is much promise, caution is warranted given the vulnerability of pediatric and clinical populations and the potential that these techniques have to modify circuit development in a cortex that is in a very dynamic state. This Research Topic hopes to provide an opportunity to share ideas across areas: human and animal researchers, clinicians, and basic scientists. We are particularly interested in papers that address issues of choosing a protocol, intensity, frequency, location, coil geometry, etc. populations where noninvasive brain stimulation may have direct impact on diagnostics and treatment, as well as the safety and ethics of applying these techniques in pediatric populations. As many may not be aware of the potential and limitations of noninvasive brain stimulation and its use for research and treatment in this area, this Research Topic promises to have broad appeal. Submissions for all Frontiers article types are encouraged.

Abstract Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of

mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basic skills are used to support the acquisition and use of abstract mathematical concepts

Who Killed Sir Walter Raleigh? Richard Dale, 2011-07-31 For 400 years the true story behind Sir Walter Raleigh's downfall his conviction for high treason and his eventual beheading has been shrouded in mystery Was he deliberately set up by the brilliant but untrustworthy Sir Robert Cecil Why did his friend Lord Cobham denounce him at his trial And how could this towering figure of the Elizabethan age be accused of conspiring with his old enemy Spain to overthrow the king In *Who Killed Sir Walter Raleigh* Richard Dale draws on his legal background to unravel the extraordinary plots and intrigues that marked the last months of Elizabeth's reign and the first weeks of James's succession In the bitter struggle for position wealth and royal favour only the most ruthless and devious could hope to win but would the dwarfish hunchbacked Cecil eventually prevail over the swashbuckling Raleigh And in the eyes of posterity who was the real victor

Science and the Economic Crisis Francesco Sylos Labini, 2016-03-21 This book not only explores the ways in which the economic crisis and associated austerity policies have adversely impacted the physical and human infrastructure and conduct of scientific research but also considers how science can help us to understand the crisis and provide original solutions Starting with a detailed but accessible analysis of the scientific method and the nature of scientific prediction the book proceeds to address the failure to forecast the economic crisis and the origins of the continuing inertia in economic policy and theory Attention is drawn in particular to the shortcomings of neoclassical economics in terms of its description of the economic system as being mechanical in nature and characterized by equilibrium This perspective mirrors the limitations and outdated ideas of nineteenth century physics which the book contrasts with the insights offered by modern physics The impact of neoliberal ideologies on scientific research is

also discussed in detail highlighting their stifling effect on innovation and diversification In closing the book emphasizes the need for state intervention to guide and support scientific research as the core engine of economic development that will deliver a sustainable future **The Design of Learning Experience** Brad Hokanson, Gregory Clinton, Monica W.

Tracey, 2015-07-03 This book delves into two divergent yet parallel themes first is an examination of how educators can design the experiences of learning with a focus on the learner and the end results of education and second how educators learn to design educational products processes and experiences The book seeks to understand how to design how learning occurs both in the instructional design studio and as learning occurs throughout the world This will change the area s semantics at a deeper level it will change its orientation from instructors and information to learners and it will change how educators take advantage of new and old technologies This book is the result of a research symposium sponsored by the Association for Educational Communications and Technology AECT **Teaching and Learning Secondary School**

Mathematics Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24 This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step **The Achievement Gap in Reading** Rosalind Horowitz, S. Jay

Samuels, 2017-04-07 In this volume prominent scholars experts in their respective fields and highly skilled in the research they conduct address educational and reading research from varied perspectives and address what it will take to close the achievement gap with specific attention to reading The achievement gap is redefined as a level at which all groups can compete economically in our society and have the literacy tools and habits needed for a good life Bringing valuable theoretical frameworks and in depth analytical approaches to interpretation of data the contributors examine factors that contribute to student achievement inside the school but which are also heavily influenced by out of school factors such as poverty and economics ethnicity and culture family and community stratifications and approaches to measurement of achievement These out of school factors present possibilities for new policies and practice The overarching theme is that achievement gaps in reading are complex and that multiple perspectives are necessary to address the problem The breadth and depth of perspectives and content in this volume and its conceptualization of the achievement gap are a significant contribution to the field Mathematical Statistics Dieter Rasch, Dieter Schott, 2018-03-19 Explores mathematical statistics

in its entirety from the fundamentals to modern methods This book introduces readers to point estimation confidence intervals and statistical tests Based on the general theory of linear models it provides an in depth overview of the following analysis of variance ANOVA for models with fixed random and mixed effects regression analysis is also first presented for linear models with fixed random and mixed effects before being expanded to nonlinear models statistical multi decision problems like statistical selection procedures Bechhofer and Gupta and sequential tests and design of experiments from a mathematical statistical point of view Most analysis methods have been supplemented by formulae for minimal sample sizes The chapters also contain exercises with hints for solutions Translated from the successful German text Mathematical Statistics requires knowledge of probability theory combinatorics probability distributions functions and sequences of random variables which is typically taught in the earlier semesters of scientific and mathematical study courses It teaches readers all about statistical analysis and covers the design of experiments The book also describes optimal allocation in the chapters on regression analysis Additionally it features a chapter devoted solely to experimental designs Classroom tested with exercises included Practice oriented taken from day to day statistical work of the authors Includes further studies including design of experiments and sample sizing Presents and uses IBM SPSS Statistics 24 for practical calculations of data Mathematical Statistics is a recommended text for advanced students and practitioners of math probability and statistics

Complex Systems, Smart Territories and Mobility Patricia Sajous, Cyrille Bertelle, 2021-01-27 This book reflects the outcome of contribution by the plural community and of the interactions between disciplines With the mass of data available through Information and Communication Technologies ICT in an unprecedented quantity since the Human History it is now possible to access dimensions of knowledge that though not hidden could not be grasped in the same way in the past The question of how this information can be used for the benefit of institutional and economic actors to foster the development of a territory Tackling the issue from a resolutely interdisciplinary perspective the authors explore the theories and methods of complex systems in order to discuss how they can contribute in these new circumstances to territorial intelligence and to the development practices in which it is embodied This book illustrates how today's research explores the multiple facets of territorial systems in order to reproduce their richness It invites readers to learn about the challenges ideas results and advances present in this domain

Reading Randomised Controlled Trials Robert Savage, Amy Fox, Anneka Dawson, Helen Gray, Clare Huxley, 2025-03-03 In early 2021/22 the Flexible Phonics reading intervention a large scale randomised controlled trial took place in 118 schools in England and involved nearly 3 000 children This study aimed to provide valuable insights into the success of largely school based education trials The Flexible Phonics trial proved to be not only an important experiment in improving children's literacy but a case study in which the methodology of single randomised controlled trials in education can be considered Reading Randomised Controlled Trials investigates the complexities of conducting randomised controlled trials in the field of education and how they can be seen as a cultural activity The book emphasises the

human operations decision making and actions that drive such trials which are often overlooked in published reports Through the case study of Flexible Phonics the book highlights the key differences between scaled educational trials and other types of trials such as pharmaceutical trials The additional focus on early childhood literacy is of significant educational importance particularly in the context of UK school partial closures in 2020 and 2021 during the Covid 19 pandemic Reading Randomised Controlled Trials is ultimately a unique resource on the implementation of randomised controlled trials in authentic school contexts and for the sustained improvement of practice in education **Advances in Child Abuse**

Prevention Knowledge Deborah Daro, Anne Cohn Donnelly, Lee Ann Huang, Byron J. Powell, 2015-06-05 This book addresses new avenues in child abuse prevention research that will expand our capacity to protect children These new avenues result from the emergence of new research methods made possible through technologic advances an understanding of the benefits of cross disciplinary research and learning and the entrance of many young scholars in the field The book explores what these avenues produce in terms of clarifying the complex problems that continue to limit our progress in addressing child maltreatment and promoting optimal child development Specifically the book showcases individual contributions from emerging scholars and show how these scholars use the frameworks and advanced methods to shape their work apply their findings and define their learning communities The book highlights the benefits of creating explicit and extended opportunities for researchers to network across disciplines and areas of interest The primary authors are young scholars from universities across the U S who have worked together as Fellows of the Doris Duke Fellowships for the Promotion of Child Well Being seeking innovations to prevent child abuse Through this program the Fellows have engaged in a robust self generating learning network designed to create the type of ongoing professional linkages and decision making style that fosters an interdisciplinary and team planning approach to research design and policy formation Managed By Morons
