*Mathematical Theory of Oil and Gas Recovery* P. Bedrikovetsky, 2013-04-17 It is a pleasure to be asked to write the foreword to this interesting new book When Professor Bedrikovetsky first accepted my invitation to spend an extended sabbatical period in the Department of Mineral Resources Engineering at Imperial College of Science Technology and Medicine I hoped it would be a period of fruitful collaboration This book a short course and a variety of technical papers are tangible evidence of a successful stay in the UK I am also pleased that Professor Bedrikovetsky acted on my suggestion to publish this book with Kluwer as part of the petroleum publications for which I am Series Editor The book derives much of its origin from the unpublished Doctor of Science thesis which Professor Bedrikovetsky prepared in Russian while at the Gubkin Institute The original DSc contained a number of discrete publications unified by an analytical mathematics approach to fluid flow in petroleum reservoirs During his sabbatical stay at Imperial College Professor Bedrikovetsky has refined and extended many of the chapters and has discussed each one with internationally recognised experts in the field He received great encouragement and editorial advice from Dr Gren Rowan who pioneered analytical methods in reservoir modelling at BP for many years

Kramer, 2003 *Competitive Solutions* R. Preston McAfee, 2009-04-11 *Competitive Solutions* is an entertaining and wideranging introduction to successful business methods applied to a variety of real world situations Rejecting the one size fits all premise that underlies so many guides to business strategy Preston McAfee develops the intellectual tools and insights needed to confront many marketplace problems Drawing on his broad experience as a consultant for major U S companies as well as extensive research McAfee emphasizes cooperation pricing litigation and antitrust as vital to a firm s competitive posture and focuses more attention on these elements than do most business strategy accounts McAfee begins by considering strategy as successfully applied by America OnLine an example that introduces many of the tools discussed in

greater depth throughout the book From here he moves to industry analysis By examining the context for developing a strategy he points out uses of positioning and differentiation that enable a firm to weaken price competition and deter rivals from stealing customers McAfee s exploration of a product s life cycle proves an invaluable guide to positioning new technology in order to maximize the potential for future customers In the centerpiece of the book McAfee lays out a how to manual for cooperation providing tactics crucial for setting standards lobbying the government and fostering industry growth Writing in a conversational manner McAfee also addresses such deep topics as organizational design and employee compensation and incentives More detailed discussions examine antitrust enforcement which is an increasingly important constraint on strategy as well as strategies for pricing bidding signaling and bargaining This book is a fascinating examination of modern business strategy and its application in many different settings Students of business and economics as well as executives and managers will recognize *Competitive Solutions* as an indispensable resource as well as a definitive vision of the strategic firm one in which each element of company strategy reinforces the other elements

#### **Oil and Gas Terms**

Howard R. Williams, Charles J. Meyers, 1976 *Heavy Crude Oils* Alain-Yves Huc, 2011 Heavy oils extra heavy oils and tar sands are major players for the future of energy They represent a massive world resource at least the size of conventional oils They are found all over the world but Canada and Venezuela together account by themselves for more than half of world deposits They share the same origin as the lighter conventional oils but their geological fate drove them into thick viscous tar like crude oils Most of them result from alteration processes mediated by microbial degradation They are characterized by a low content of lighter cuts and a high content of impurities such as sulfur and nitrogen compounds and metals so their production is difficult and deployment of specific processes is required in order to enhance their transportability and to upgrade them into valuable products meeting market needs and honouring environmental requirements Although these resources are increasingly becoming commercially producible less than 1% of total heavy crude oil deposits worldwide are

under active development The voluntarily wide scope of this volume encompasses geology production transportation upgrading economics and environmental issues of heavy oils It does not pretend to be exhaustive but to provide an authoritative view of this very important energy resource
