NUMERICAL, SYMBOLIC AND STATISTICAL COMPUTING FOR CHEMICAL ENGINEERS USING MATLAB Ghosh, Pallab, 2018-09-01 Numerical analytical and statistical computations are routine affairs for chemical engineers They usually prefer a single software to solve their computational problems and at present MATLAB has emerged as a powerful computational language which is preferably used for this purpose due to its built in functions and toolboxes Considering the needs and convenience of the students the author has made an attempt to write this book which explains the various concepts of MATLAB in a systematic way and

makes its readers proficient in using MATLAB for computing. It mainly focuses on the applications of MATLAB rather than its use in programming basic numerical algorithms. Commencing with the introduction to MATLAB, the text covers vector and matrix computations, solution of linear and non-linear equations, differentiation and integration, and solution of ordinary and partial differential equations. Next, analytical computations using the Symbolic Math Toolbox and statistical computations using the Statistics and Machine Learning Toolbox are explained. Finally, the book describes various curve fitting techniques using the Curve Fitting Toolbox. Inclusion of all these advanced level topics in the book stands it out from the rest.

KEY FEATURES Numerous worked out examples to enable the readers understand the steps involved in solving the chemical engineering problems. MATLAB codes to explain the computational techniques. Several snapshots to help the readers understand the step by step procedures of using the toolboxes. Chapter end exercises including short answer questions and numerical problems. Appendix comprising the definitions of some important and special matrices. Supplemented with Solutions Manual containing complete detailed solutions to the unsolved analytical problems. Accessibility of selected colour figures including screenshots and results outputs of the programs cited in the text at www.phindia.com. Pallab_Ghosh

STOICHIOMETRY AND PROCESS CALCULATIONS K.V. NARAYANAN, B.

LAKSHMIKUTTY, 2016-12-01 Designed as a textbook for the undergraduate students of chemical engineering and related disciplines such as biotechnology, polymer technology, petrochemical engineering, electrochemical engineering, environmental engineering and safety engineering, the chief objective of the book is to prepare students to make analysis of chemical processes through calculations and to develop systematic problem solving skills in them. The text presents the fundamentals of chemical engineering operations and processes in a simple style that helps the students to gain a thorough understanding of chemical process calculations. The book deals with the principles of stoichiometry to formulate and solve material and energy balance problems in processes with and without chemical reactions. With the help of examples, the book explains the construction and use of reference substance plots, equilibrium diagrams, psychrometric charts, steam tables and enthalpy composition diagrams. It also elaborates on thermophysics and thermochemistry to acquaint the students with the thermodynamic principles of energy balance calculations. The book is supplemented with Solutions Manual for instructors containing detailed solutions of all chapter end unsolved problems.

NEW TO THE SECOND EDITION Incorporates a new chapter on Bypass, Recycle and Purge Operations. Comprises updations in some sections and presents new sections on Future Avenues and Opportunities in Chemical Engineering Processes in Biological and Energy Systems. Contains several new worked out examples in the chapter on Material Balance with Chemical Reaction. Includes GATE questions with answers up to the year 2016 in Objective type questions.

KEY FEATURES SI units are used throughout the book. All basic chemical engineering operations and processes are introduced and different types of problems are illustrated with worked out

examples Stoichiometric principles are extended to solve problems related to bioprocessing environmental engineering etc Exercise problems more than 810 are organised according to the difficulty level and all are provided with answers *Air Pollution Control Engineering* Noel de Nevers,2016-12-15 Engineers in multiple disciplines environmental chemical civil and mechanical contribute to our understanding of air pollution control To that end Noel de Nevers has incorporated these multiple perspectives into an engaging and accessible overview of the subject While based on the fundamentals of chemical engineering the book is accessible to any reader with only one year of college chemistry In addition to detailed discussions of individual air pollutants and the theory and practice of air pollution control devices de Nevers devotes seven chapters to topics that influence device selection and design such as atmospheric models and U S air pollution law The Third Edition s many in text examples and end of chapter problems provide a more complex treatment of the concepts presented Significant updates include more discussion on the problem of greenhouse gas emissions and a thorough look at the Volkswagen diesel emission scandal **Transport Phenomena** Robert S. Brodkey,Harry C. Hershey,2003-02 Part II covers applications in greater detail The three transport phenomena heat mass and momentum transfer are treated in depth through simultaneous or parallel developments **Chemical Engineering Design and Analysis** T. Michael Duncan,Jeffrey A. Reimer,2019-01-24 The go to guide to learn the principles and practices of design and analysis in chemical engineering *Solutions manual* Richard E. Balzhiser,Michael R.
