

Science Club Rocket Experiment

- The science club is having a contest between two teams to determine which team created a rocket that will reach the greatest height. Both teams launch will their rocket from the same location.

Team 1:

The equation $h = -24t^2 + 288t$ models the flight of the rocket for Team 1.

h = height of the rocket in feet after t seconds.
Velocity is 288 feet per second.

Team 2:

The equation $h = -18t^2 + 261t$ models the flight of the rocket for Team 2.

h = height of the rocket in feet after t seconds.
Velocity is 261 feet per second.

- Determine the time that each rocket will be in the air.
- Determine the maximum height for each rocket.
- Graph the trajectory of both rockets on the graph and label each with the equation and the team.

Equation	Factored Equation	Time in the Air	Maximum Height
Rocket 1			
Rocket 2			

Team 3 builds a rocket that reaches a greater height and stays in the air longer than the rockets for either Team 1 or Team 2. Create an equation that could model the flight for that rocket and then graph it on the graph and label it as Team 3. Explain how you created the equation.

Performance Assessment of Control Loops Biao Huang, Sirish L. Shah, 1999-09-22 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination Benchmarking is a technique first applied by Rank Xerox in the late 1970s for business processes As a subject in the commercial arena benchmarking thrives with for example a European Benchmarking Forum It has taken rather longer for benchmarking to make the transfer to the technical domain and even now the subject is making a slow headway A key research step in this direction was taken by Harris 1989 who used minimum variance control as a benchmark for controller loop assessment This contribution opened up the area and a significant specialist literature has now developed Significant support for the methodology was given by Honeywell who have controller assessment routines in their process control

applications software therefore it is timely to welcome a first monograph on controller performance assessment by Biao Huang and Sirish Shah to the Advances in Industrial Control series Mathematical Tasks in Classrooms Around the World, 2010-01-01 Mathematical tasks have long been recognized as crucial mediators between mathematical content and the mathematics learner For many people the mathematics classroom is defined by the type of tasks one finds there and this is appropriate Mathematical tasks are the embodiment of the curricular pretext that brings each particular set of individuals together in every mathematics classroom In other contexts individuals come together to engage in musical performances or dramatic performances The performances of the mathematics classroom are largely the performance of mathematical tasks and if we are to understand and facilitate the learning that is the purpose of such settings then we must understand the nature of the performances that we find there The classroom performance of a task is ultimately a unique synthesis of task teacher students and situation Of particular interest are differences in the function of mathematically similar tasks when employed by different teachers in different classrooms for different instructional purposes with different students By making comparison possible between the classroom use of mathematical tasks in different classrooms around the world the analyses reported in this book reveal the profound differences in how each teacher utilises mathematical tasks in partnership with their students to create a distinctive form of mathematical activity The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants The LPS research design documents sequences of at least ten lessons using three video cameras supplemented by the reconstructive accounts of classroom participants obtained in post lesson video stimulated interviews and by test and questionnaire data and copies of student written material In each participating country data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory Captivate, Activate, and Invigorate the Student Brain in Science and Math, Grades 6-12 John Almarode, Ann M. Teaching to the Math Common Core State Standards F. D. Rivera, 2015-06-17 This is a methods book for preservice middle level majors and beginning middle school teachers. It takes a very practical approach to learning to teach middle school mathematics in an emerging Age of the Common Core State Standards. The Common Core State Standards in Mathematics CCSSM is not meant to be the official mathematics curriculum; it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace. A quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the Grade 5 through Grade 8 and traditional pathway Algebra I portions of the CCSSM, first with issues in content practice, assessment, learning, teaching, and classroom management, pursued next and in that order. In this book we explore what it means to teach to the CCSSM within an alignment mindset involving content practice, learning, teaching, and assessment. The Common Core state content standards which pertain to mathematical knowledge, skills, and applications have been carefully crafted so that they are teachable, learnable, coherent, fewer, clearer, and higher. The practice standards which refer to institutionally valued mathematical actions, processes, and habits have been conceptualized in ways that will hopefully encourage all middle school students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation. Thus, in the CCSSM, proficiency in content alone is not sufficient and so does practice without content, which is limited. Content and practice are both equally important and thus must come together in teaching, learning, and assessment in order to support authentic mathematical understanding. This blended, multisourced text is a getting smart book. It prepares preservice middle level majors and beginning middle school teachers to work within the realities of accountable pedagogy and to develop a proactive disposition that is capable of supporting all middle school students in order for them to experience growth in

Cognitive Training Tilo Strobach, Julia Karbach, 2020-10-20 The second edition of this book brings together a cutting edge international team of contributors to critically review the current knowledge regarding the effectiveness of training interventions designed to improve cognitive functions in different target populations. Since the publication of the first volume the field of cognitive research has rapidly evolved. There is substantial evidence that cognitive and physical training can improve cognitive performance but these benefits seem to vary as a function of the type and the intensity of interventions and the way training induced gains are measured and analyzed. This book will address the new topics in psychological research and aims to resolve some of the currently debated issues. This book offers a comprehensive overview of empirical findings and methodological approaches of cognitive training research in different cognitive domains: memory, executive functions, etc. types of training: working memory training, video game training, physical training, etc. age groups: from children to young and older adults. target populations: children with developmental disorders, aging workers, MCI patients, etc. settings: laboratory based studies, applied studies in clinical and educational settings and methodological approaches: behavioral studies, neuroscientific studies. Chapters feature theoretical models that describe the mechanisms underlying training induced cognitive and neural changes. **Cognitive Training: An Overview of Features and Applications, Second Edition** will be of interest to researchers, practitioners, students and professors in the fields of psychology and neuroscience.
