1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves gathering information about the situation and identifying the specific issue that needs to be addressed.

2. Once a problem has been identified, the next step is to define the problem clearly. This involves stating the problem in a concise and specific manner, identifying the scope of the problem, and determining the goals that need to be achieved.

3. The third step in the process is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem. It is important to consider a wide range of options and to evaluate the potential benefits and drawbacks of each solution.

4. The fourth step is to select the best solution. This involves comparing the potential solutions and choosing the one that is most likely to be effective and feasible. It is important to consider the resources available and the time and effort required to implement each solution.

5. The final step in the process is to implement the chosen solution. This involves putting the solution into action and monitoring its progress. It is important to communicate the solution to all relevant parties and to ensure that everyone is working towards the same goal.

Under 600 ppm, the RDM will start injecting fuel at a constant rate until the CV module receives a lean spark, indicating the spark and produces a rich pulse signal for the RDM to calculate the fuel pulse timing. The CV module controls the spark pulse timing. After 600 ppm, the RDM will stop fueling this period. After 600 ppm, the RDM will calculate the fuel pulse timing (FTI) and change into rich pulse timing (RPT) and change into rich pulse timing (RPT) and change into rich pulse timing (RPT), providing a pulse of fuel injection to maintain, providing a pulse of fuel injection to maintain, providing a pulse of fuel injection to maintain.
