**Zebrafish in Development and Disease** Gokhan Dalgic, Rebecca Ann Wingert, Ryan M. Anderson, 2019-12-06. There are only a few vertebrate systems that can be used to model human diseases for biomedical discovery. The zebrafish model provides key advantages over existing models. Their externally developing embryos provide high throughput, non-invasive imaging, chemical screening, forward and reverse genetics, and their regeneration capacity make zebrafish a valuable system for novel discovery. Developmental studies using zebrafish have influenced discoveries in many human health-related conditions. This Research Topic covers all aspects of zebrafish studies, providing developmental mechanisms to human health conditions. The aim of the Research Topic was to foster a platform to bring all levels of zebrafish research, including but not limited to development, disease, regeneration, drug screening, bioinformatics, and Omics studies.
