*The Regional Development Guide, 1966-2000* National Capital Regional Planning Council (U.S.), 1966 **Advanced Transport and Spatial Systems Models** Tschangho J. Kim, 2012-12-06 The usual view in a mixed economy is that some goods and services are produced privately and some such as transportation are produced publicly Private institutions such as households and entrepreneurs produce and consume goods and services in pursuing their parochial interests while the public sector attempts to broaden public interests More precisely the public sector constructs new transportation systems improves their capacities and regulates services and prices and the private sector chooses locations of production modes of transportation and routes of shipment At the same time all forms of transportation influence our lives and cause us concern for our environment health and safety Thus transportation is intimately woven into the daily life of individuals and organizations in our society Because of its constant presence transportation is easy to overlook until it fails in some way Few

would contend that private firms could or should construct an efficient transportation system in a mixed economic system. Because the entire transportation system must be integrated and coordinated, firms with the power to construct such a system would have considerable monopoly control.
