

• BALL DIFFERENTIAL

The ball differential can be adjusted through the hole in each diff housing. Insert the 1.5mm allen wrench (provided) through the hole. Push down on the wrench and rotate the left wheel until the wrench locks into the hole in the differential housing. See the picture for step A-12 in the 4-TEC Assembly Manual. Continue to push on the wrench and rotate the wheel until the wrench is fully inserted into the differential. This locks the diff. Now, turn the right

wheel clockwise to tighten the diff, or counterclockwise to loosen it. Turn the left front wheel to adjust the front diff. (following the same procedure as the rear). *The preliminary setting for the ball diff is to tighten it until it stops and then back it off 1/4 of a turn.* The range of adjustment from that point is plus or minus 1/8

of a turn. Adjust the Ball diffs for the best cornering performance on your track conditions. Do not run either ball differential so loose that you can see and hear slippage (high pitch squealing sound) while the 4-TEC is accelerating. This could damage your differential.

MAINTENANCE

- Keep the 4-TEC clean of accumulated dirt and oil, especially around the shock absorbers and the bushings in the wheels.
- Clean and re-oil the bushings whenever the wheels are not rolling freely. Lightly oil the bushings with a lightweight electric motor oil. If the wheels are wobbly and loose, the bushings should be replaced. Consider upgrading to Traxxas ball bearings (part #4606 and 4611).
- The steering servo saver will wear out over time. If the steering becomes loose, the servo saver should be replaced.

PAINTING THE BODY

Please read this entire section and plan your paint job first.

• BUYING PAINT

The body supplied with your kit is molded from clear Lexan[®], so that it will be extremely lightweight and durable. The body

should be painted on the underside so that the color will not be scratched off while running. The best way to paint the body is by using thinned paints sprayed through an airbrush or spray gun. If you do not have these tools, the next best way is using spray can paints. Whatever paint you use, be sure that it is made for painting Lexan[®] and polycarbonate. Other types of paints and solvents can attack the body material and cause it to appear foggy.

• PREPARING THE BODY

The body must be washed thoroughly with dish soap and water to remove any grease or oil (i.e. fingerprints) which may keep the paint from adhering to it. Dry the body completely with a soft, lint-free cloth. Be careful using paper towels on the outside of the body, as they can scratch the plastic.

Most racing regulations require that the windows be left clear and not cut out. Use the supplied adhesive tape masks to mask the windows. Mask off any stripes or custom effects with either masking tape or special tape made for striping. This special tape is available from automotive paint supply stores and will provide sharper edges than masking tape. For easy, custom-colored striping, automotive pinstriping tape can be applied to the inside of the body and painted over. Be sure that all of your tape and masks are fully pressed down (burnished) so that the paint will not run or bleed underneath.

Usually, the darker colors are painted first, followed by the lighter colors. If your paint scheme would be easier to mask by covering the dark areas and spraying them last, be sure the lighter colors are opaque enough to prevent the darker color from showing through. Lighter colors can be backed with silver to help make them opaque.

The body has a clear peel coat on the outside. Leave the peel coat on the body until after it is painted. This will protect the outside of the body from paint overspray.

• SPRAYING THE BODY

Read the directions on your bottle or can of paint and shake, mix, or thin the paint, as required. It is very important to avoid breathing the paint vapors, as they are extremely harmful. Spray the paint outdoors in well-ventilated areas only. Apply the paint to the body sparingly and in light coats. Be patient! Let the paint dry fully in between coats. This will prevent accidentally smearing wet paint. Take extra care when masks are being removed.

• CUTTING THE BODY

Use the scribe lines in the body as a guide when trimming. Hobby scissors are best; a good pair of sharp scissors will work, if they are small enough to work around the tighter curves. Do not try to cut all the way through or saw the body material with a hobby knife. To make the body mounting holes, use a tapered reamer, if available. A drill bit will not work on the Lexan body. It is better to cut the body out after it has been painted, rather than before.

After the peel coat is removed, apply the decals. The decals are printed on clear mylar, so that you won't have to cut exactly around the image. Do try to cut as closely to the image as you can. Test position the decals before removing the backing. Once the decals have been applied, they cannot be removed without damaging them. If you have air bubbles in the decals, puncture the center of each bubble with a sharp pin and push the air out. If you have creases along the outer edges of a decal (especially when applied to curved surfaces), use a hobby knife to cut along the top of the crease and overlap the edges.
