1

Remove the existing roof skid plate.

3

Install the new roof skid plate; feed the wire harness connector through the hole in the roof.

4

Remove the existing front bumper.

2

Body modification:

Before installation of the new roof skid plate, the vehicle body will need modification. Peel the backing from the included self-adhesive cutting template. Install the template on the vehicle body, aligning the holes in the template with the front screw holes in the roof. Using a tapered body reamer, carefully cut holes in the roof to the dotted lines on the template (note the hole diameters indicated on the template and the corresponding diameter measurements on the body reamer). Use body scissors to cut out the section between the two holes as indicated.

5

Install the new front bumper. See step 9 for wire routing.
