

1) Turn on the radio system, and make sure the throttle and steering servos are operating quickly and that none of the linkages are binding. When operating your model, always turn the transmitter on first, followed by the receiver in the model. After driving, turn off the receiver first, and then turn off the transmitter. **NEVER TURN OFF THE RADIO WHILE THE ENGINE IS RUNNING.** (The on/off switch only turns the receiver on and off. It does not turn off a running engine.)

2) It is very important that all of the "AA" radio system batteries are strong or fully charged. **DO NOT ATTEMPT TO OPERATE THE MODEL WITH WEAK BATTERIES. IF THE BATTERIES FAIL WHILE THE MODEL IS IN MOTION, IT CAN CONTINUE TO RUN OUT OF CONTROL.**

3) Always check the routing of the battery pack wires and their condition before each use. A melted wire can cause a short-circuit and lead to a loss of control.

4) Before start-up, have a friend help in range testing the model's radio to insure complete control at the maximum distance from the driver.

STARTING THE ENGINE

STEP 1: FILLING THE FUEL TANK

Use a small fuel bottle or bulb to put fuel into the tank. Only fill the tank to the bottom of the fill neck. The model can carefully be refueled while the engine is running.

STEP 2: OILING THE AIR FILTER ELEMENT

The foam air filter element must be oiled before running the engine. For the best filtration, use the special type of oil made for foam air filters. It should be available locally from motorcycle shops and small engine repair shops. Lightweight motor oil or after-run oil may also be substituted. Saturate the filter element with oil and then thoroughly squeeze out the excess. For extremely dusty conditions, special two or three-stage, pre-lubed filters are available from Traxxas (Part #4062, and 4063).

STEP 3: HIGH-SPEED MIXTURE SETTING

The high-speed mixture screw controls how much fuel enters the engine during mid and high-speed operation. Turn the high-speed mixture screw clockwise, by hand, until it stops (**Do not tighten or the needle may be damaged**). Now, turn the mixture screw counter-clockwise $2\frac{1}{2}$ complete turns.

Note: If you live in higher altitudes (1000 feet or higher above sea level), it may be necessary for you to set your high-speed fuel mixture as much as $\frac{1}{2}$ a turn leaner than outlined here. Call 1-888-TRAXXAS if you have questions about setting your fuel mixture.

STEP 4: SETTING THE IDLE SPEED

The idle screw regulates the throttle opening to control the idle speed. The throttle opening at idle should be set as shown in the drawing. The opening should be 1 to $1\frac{1}{2}$ millimeters at the widest point in the opening. The idle speed may need to be readjusted after the engine is warm.

STEP 5: LOW SPEED MIXTURE SETTING

This screw meters the fuel at low speeds. The low-speed mixture screw is located in the end of the carburetor, inside the throttle arm. This screw controls how much fuel enters the engine at idle and low throttle. This adjustment will smooth the idle and improve acceleration to mid speed. Make this adjustment with the throttle closed, after setting the idle. Gently turn this screw clockwise until it stops. Now turn the low-speed mixture screw counter-clockwise $1\frac{3}{4}$ turns.

STEP 6: PRIMING THE ENGINE

Some models have a button on top of the fuel tank, referred to as the prime button. Pressing it will manually pump fuel into the carburetor. Press the button several times until
