

Tri-Carb® 2100TR  
Liquid Scintillation Counter

The Tri-Carb® 2100TR Liquid scintillation counter is computer-controlled, benchtop liquid scintillation analyzer for detecting small amounts of alpha, beta and gamma radioactivity.

- **Patented TR-LSC® (Time-Resolved Liquid Scintillation Counting)** using unique afterpulse rejection technology is featured for high sensitivity, low background counting of LS samples. TR-LSC increases sample throughput and reduces cocktail consumption.
- **Built-in IBM® compatible, Pentium® class single board computer** features 4 MB RAM; 3.5 inch, 1.44 MB floppy disk; video graphics adapter card; high resolution color SVGA CRT display; clock/calendar with battery support; serial communications and parallel printer port; and IBM® PC DOS 3.86 or higher operating system.
- **A cassette-based, bidirectional conveyor mechanism** is standard with fully accessible sample capacity of either 400 standard 10 mL vials or 720 small 4 or 7 mL vials, depending upon configuration purchased.
- **High resolution linear Spectralyser™ memory**, calibrated in keV has three measuring regions with preset and user adjustable settings. The high resolution multichannel analyzer accumulates all sample counting information. Spectra can be interpolated to the nearest 1/10 keV over an energy range of 0-2,000 keV.
- **SNIC (Self-Normalization and Calibration)** recalibrates the Spectralyser and quench-indicating parameters via a <sup>137</sup>Cs sealed reference for absolute activity calculations via the Direct DPM technique.
- **IPA™ (Instrument Performance Assessment)** database stores the results for each of eight IPA parameters into a built-in database for instant recall as tables, and as three vs. performance charts. IPA data may also be transmitted through RS-232 for storage. IPA shows trends of IPA parameters to identify instrumental problems.

- Multitasking operating environment with color SVGA CRT monitor is mounted on a maneuverable support arm, and full alphanumeric keyboard installed in a pull-out drawer. System simultaneously computes, analyzes data, counts, reports, plots, changes samples, and performs display functions.
- Multi-user sample processing for 15 users, includes automatic recall and summary printout of counting conditions and data reduction routines by Quick-Count protocol inserts (30 or 60 protocol options are available).
- Direct DPM (Disintegrations Per Minute) for single label pure beta or beta/gamma samples provides single low DPM for the full range of beta emitters, even heavily quenched 'H. Does not require the user to store quench curves, and different emitters may be counted in the same sample.
