

Solving Quadratic Equations by Factorising

Solving quadratic equations by factorising allows us to calculate values of the unknown variable in a quadratic equation using factorisation.

 **Example** Solve $x^2 - 8x + 15 = 0$

$$(x - 3)(x - 5) = 0$$

$$x - 3 = 0$$

$$x = 3$$

$$x - 5 = 0$$

$$x = 5$$

From Strange Simplicity to Complex Familiarity Manfred Eigen, 2013 This book presents a vivid argument for the almost lost idea of a unity of all natural sciences It starts with the strange physics of matter including particle physics atomic physics and quantum mechanics cosmology relativity and their consequences Chapter I and it continues by describing the properties of material systems that are best understood by statistical and phase space concepts Chapter II These lead to entropy and to the classical picture of quantitative information initially devoid of value and meaning Chapter III Finally information space and dynamics within it are introduced as a basis for semantics Chapter IV leading to an exploration of life and thought as new problems in physics Chapter V Dynamic equations again of a strange but very general nature bring about the complex familiarity of the world we live in Surprising new results in the life sciences open our eyes to the richness of physical thought and they show us what can and what cannot be explained by a Darwinian approach The abstract physical approach is applicable to the origins of life of meaningful information and even of our universe
