Switzerland International Monetary Fund. European Dept.,2018-06-18 This Selected Issues paper analyzes key features of corporate taxation in Switzerland The Swiss corporate tax system includes many aspects of a territorial regime is highly attractive for multinational companies and collects non negligible revenues but the status quo is not sustainable The proposed reform would eliminate differences in the tax treatment of foreign and Swiss sourced income Further cantons are expected to lower their corporate income tax CIT rates bringing the combined municipal cantonal and federal tax rate averaged across cantons to about 13.9 percent Costs of lowering the CIT rates would be unequally distributed across cantons and would be costlier for cantons with a large immobile CIT base [Federal Register](#) ,2013-11 [The Quiet Power of Indicators](#) Sally Engle Merry, Kevin E. Handbook of International Climate Change Law Cinnamon Piñon Carlarne, Kevin R. Gray, Richard Tarasofsky, 2016 As the threats posed by changing weather patterns are becoming more apparent climate change law has emerged as an important area of law in its own right This Handbook provides a comprehensive understanding of this growing subject setting out the key institutions and processes and featuring interdisciplinary insights from leading experts **Flood Proofing in Urban Areas** Daniele Fabrizio Bignami, Renzo Rosso, Umberto Sanfilippo, 2019-06-05 Flood control in urban areas can be feasibly and cost effectively enhanced by implementing flood proofing approaches to risk reduction in the context of environmental and land use planning and management Indeed flood proofing makes it possible to improve integrate and in some cases even replace traditional measures for flood control reducing the vulnerability and increasing the resilience of buildings and infrastructures This book begins by reviewing the physics of stability and instability of both human beings and buildings under flood conditions together with criteria and models both conventional and innovative for assessing flood strains In turn it presents a range of flood proofing concepts and techniques together with a complete and updated classification of related methods and devices This provides a user friendly tool to help identify appropriate solutions to real world problems for each specific risk scenario In particular the book focuses on temporary flood proofing techniques given their ability to deliver effective performance at low costs Lastly it features an overview of norms guidelines and laboratory recommendations that are currently being adopted in various countries with regard to flood proofing devices and testing procedures The purpose of this book is essentially to encourage authorities stakeholders technicians and end users to successfully develop flood proofing solutions that can reduce flood risk in a pragmatic manner In addition the authors hope to inspire researchers manufacturers and designers engineers architects urban planners and urban managers to pursue further advances in this key sector of public and private safety in urban areas **United States of America Congressional Record, Proceedings and Debates of the 113th Congress Second Session Volume 160 - Part 5**, Advances in Modern Mental Chronometry José M Medina, Willy Wong, José A Díaz, Hans Colonius, 2015-05-19 Mental chronometry encompasses all aspects of time processing in the nervous system and constitutes a standard tool in many disciplines including theoretical and experimental psychology and human neuroscience Mental chronometry has represented a fundamental approach to elucidate the time course of many cognitive phenomena and their underlying neural circuits over more than a century Nowadays mental chronometry continues evolving and expanding our knowledge and our understanding of the temporal organization of the brain in combination with different neuroscience techniques and advanced methods in mathematical analysis In research on mental chronometry human reaction responses times play a central role Together with reaction times other topics in mental chronometry include vocal manual and saccadic latencies subjective time psychological time interval timing time perception internal clock time production time representation time discrimination time illusion temporal summation temporal integration temporal judgment redundant signals effect perceptual decision and motor time etc The aim of this research topic

is to provide an overview of the state of the art in this field its relevance recent findings current challenges perspectives and future directions Thus as a result a collection of 14 original research and opinion papers from different experts have been gathered together in a single volume We hope this research topic will provide a useful framework and an up to date set of papers for further discussion on mental chronometry within the human brain We are grateful to all the referees for their valuable support effort and time during the creation of the research topic Granada April 2015 Jos M Medina Willy Wong Jos A D az Hans Colonius **Fetal Therapies and Maternal-Fetal Tolerance** Graça Almeida-Porada,Tippi

MacKenzie,2016-11-08 The ability to diagnose and treat genetic diseases before birth represents one of the foremost breakthroughs of modern medicine While fetal surgery has advanced in the last several decades the prospect of applying developments in stem cell biology and gene therapy to the fetal environment remains an open frontier This issue represents the work of international experts in the field of fetal therapy who came together at the first meeting of the International Fetal Transplantation and Immunology Society in 2014 This meeting was convened in an effort to provide a consensus for future applications of in utero transplantation and gene therapy as well as form an international community of colleagues to nurture this field The effect of hearing loss on neural processing Jonathan E. Peelle,Arthur Wingfield,2015-06-03 Efficient auditory processing requires the rapid integration of transient sensory inputs This is exemplified in human speech perception in which long stretches of a complex acoustic signal are typically processed accurately and essentially in real time Spoken language thus presents listeners auditory systems with a considerable challenge even when acoustic input is clear However auditory processing ability is frequently compromised due to congenital or acquired hearing loss or altered through background noise or assistive devices such as cochlear implants How does loss of sensory fidelity impact neural processing efficiency and health How does this ultimately influence behavior This Research Topic explores the neural consequences of hearing loss including basic processing carried out in the auditory periphery computations in subcortical nuclei and primary auditory cortex and higher level cognitive processes such as those involved in human speech perception By pulling together data from a variety of disciplines and perspectives we gain a more complete picture of the acute and chronic consequences of hearing loss for neural functioning **Research Handbook on EU Public Procurement Law** Christopher

Bovis,2016-07-27 Public procurement law is a necessary component of the single market because it attempts to regulate the public markets of Member States and represents a key priority for the European Union This Research Handbook makes a major contribution to the understanding of the current EU public procurement regime its interface with the law of the internal market and the pivotal role that this will play in the delivery of the European 2020 Growth Strategy **Health Informatics Meets EHealth** G. Schreier,E. Ammenwerth,A. Hörbst,2016-05-12 Progress in medicine has traditionally relied heavily on classical research pathways involving randomized clinical trials RCTs to establish reliable evidence for any given therapeutic intervention However not only are RCTs lengthy and expensive they have a number of other disadvantages

including the fact that they are currently failing to keep pace with the number of potential innovative treatment options being developed particularly in areas such as rare diseases With the vast amount of data increasingly available for use in profiling patient characteristics and establishing correlations between outcomes and potential predictors predictive modeling may offer a potential solution to the limitations of RCTs This book presents the proceedings of the 2016 Health Informatics meets eHealth conference held in Vienna Austria in May 2016 The conference provides a platform for researchers practitioners decision makers and vendors to discuss innovative health informatics and eHealth solutions with a view to improving the quality efficacy and efficiency of healthcare The theme of the conference is Predictive Modeling in Healthcare Covering subjects as diverse as fall detection in the elderly diabetes physiotherapy and pediatric oncology this book will be of interest to all those working in the field of e healthcare and its delivery **FCC Record** United States. PAIN - Novel targets and new technologies Susan Hua,Peter John Cabot,2015-01-22 The problem of clinical pain management is complex and far reaching as it encompasses many different types of pain such as arthritis musculoskeletal conditions neuropathic pain and visceral pain It is widely known that many of the well established analgesic pathways are centrally based involving spinal and supraspinal sites However pain can also be effectively controlled by peripheral pathways The analgesics market is growing and the driving forces are the aging population and need for better therapeutic benefits There are various analgesic products that are available that can be administered by various routes yet research is active in identifying new technologies for better drug targeting and novel targets to gain improved therapeutic efficiency This e Book PAIN novel targets and new technologies has brought together experts in the field of pain at the physiological pharmacological and pharmaceutical levels to discuss novel pain targets and new pain technologies across the various types of pain This information is presented as novel research findings short communications and review articles The goal of this e Book is to generate further collaborative discussion on the future and direction of pain therapies Rules of

Engagement and the International Law of Military Operations J. F. R. Boddens Hosang,2020 The book systematically analyses rules of engagement ROE a crucial component of the legal framework in which every soldier operates The book explains how such rules operate in both the legal context and military operational world and how ROE are applied in practice

Toward a Unified View of the Speed-Accuracy Trade-Off: Behaviour, Neurophysiology and Modelling Dominic Standage, Da-Hui Wang, Richard P. Heitz, Patrick Simen,2016-02-18 Everyone is familiar with the speed accuracy trade off SAT To make good choices we need to balance the conflicting demands of fast and accurate decision making After all hasty decisions often lead to poor choices but accurate decisions may be useless if they take too long This notion is intuitive because it reflects a fundamental aspect of cognition not only do we deliberate over the evidence for decisions but we can control that deliberative process This control raises many questions for the study of choice behaviour and executive function For example how do we figure out the appropriate balance between speed and accuracy on a given task How do we impose

that balance on our decisions and what is its neural basis Researchers have addressed these and related questions for decades using a variety of methods and offering answers at different levels of abstraction Given this diverse methodology our aim is to provide a unified view of the SAT Extensive analysis of choice behaviour suggests that we make decisions by accumulating evidence until some criterion is reached Thus adjusting the criterion controls how long we accumulate evidence and therefore the speed and accuracy of decisions This simple framework provides the platform for our unified view In the pages that follow leading experts in decision neuroscience consider the history of SAT research strategies for determining the optimal balance between speed and accuracy conditions under which this seemingly ubiquitous phenomenon breaks down and the neural mechanisms that may implement the computations of our unifying framework Intra- and inter-species interactions in microbial communities Luis Raul Comolli, Birgit Luef, Manfred Auer, 2015-03-03 Recent developments in various OMICs fields have revolutionized our understanding of the vast diversity and ubiquity of microbes in the biosphere However most of the current paradigms of microbial cell biology and our view of how microbes live and what they are capable of are derived from in vitro experiments on isolated strains Even the co culturing of mixed species to interrogate community behavior is relatively new But the majority of microorganisms lives in complex communities in natural environments under varying conditions and often cannot be cultivated Unless we obtain a detailed understanding of the near native 3D ultrastructure of individual community members the 3D spatial community organization their metabolic interdependences coordinated gene expression and the spatial organization of their macromolecular machines inventories as well as their communication strategies we won t be able to truly understand microbial community life How spatial and also temporal organization in cell cell interactions are achieved remains largely elusive For example a key question in microbial ecology is what mechanisms microbes employ to respond when faced with prey competitors or predators and changes in external factors Specifically to what degree do bacterial cells in biofilms act individually or with coordinated responses What are the spatial extent and coherence of coordinated responses In addition networks linking organisms across a dynamic range of physical constraints and connections should provide the basis for linked evolutionary changes under pressure from a changing environment Therefore we need to investigate microbial responses to altered or adverse environmental conditions including phages predators and competitors and their macromolecular metabolic responses according to their spatial organization We envision a diverse set of tools including optical spectroscopical chemical and ultrastructural imaging techniques that will be utilized to address questions regarding e g intra and inter organism interactions linked to ultrastructure and correlated adaptive responses in gene expression physiological and metabolic states as a consequence of the alterations of their environment Clearly strategies for co evolution and in general the display of adaptive strategies of a microbial network as a response to the altered environment are of high interest While a special focus will be placed on terrestrial sole species or mixed biofilms we are also interested in aquatic systems biofilms in general and microbes living in

symbiosis In this Research Topic we wish to summarize and review results investigating interactions and possibly networks between microbes of the same or different species their co occurrence as well as spatiotemporal patterns of distribution Our goal is to include a broad spectrum of experimental and theoretical contributions from research and review articles to hypothesis and theory aiming at understanding microbial interactions at a systems level

Taxation Trends in the European Union Comisión Europea, 2012 This report contains a detailed statistical and economic analysis of the tax systems of the Member States of the European Union Iceland and Norway The data are presented within a unified statistical framework the ESA95 harmonised system of national and regional accounts which makes it possible to assess the heterogeneous national tax systems on a fully comparable basis The standard classifications of tax revenues by major type of tax or by level of government presented in most international tax revenue statistics are hard to interpret in economic terms This publication stands out for offering a breakdown of tax revenues by type of tax base i e according to whether they are raised on consumption labour or capital This classification is based on disaggregated tax data and on a breakdown of the revenue from the personal income tax In addition the report contains indicators of the average effective tax burden on consumption labour and capital Country chapters give an overview of the tax system in each of the 29 countries covered the revenue trends and the main recent policy changes Detailed tables allow comparison between the individual countries and European averages Data cover the 1995 2011 period and are presented both as a percentage of GDP and as a percentage of total taxation EU Bookshop
