Consumer Optimization Problem Solving Alfred L Norman, 2014-12-15 What algorithms are tractable depends on the speed of the processor. Given the speed of digital computers polynomial algorithms are considered tractable. But a human can take several seconds to make one binary comparison between two pens. Given this slow speed sublinear algorithms are considered tractable for an unaided human and this defines Simon's concept of bounded rationality. Humans make simplifications to solve the intractable consumer optimization problem. Consumers search for goods and services item by item which greatly reduces the number of alternatives to consider. In addition consumers have operators that can process a set in a single operation. Also consumers budget by incremental adjustment. In considering consumer performance the question to ask is how close to optimal is consumer performance and not whether consumers optimize. As a yes/no question. Given the ordinal nature of utility theory this creates a basic measurement problem. The book presents a review of the literature on consumer performance. This is an opportune time to study consumer procedures because the Internet provides a media to make substantial improvements in consumer performance. The book includes a case study comparing the performance of a digital camera selection code with the advice of sales people. A field experiment demonstrates that the software code provides better advice.

BRICs and Beyond Stephanie Jones, 2012-06-04 BRICs and Beyond is an international business executive text written especially for executive and MBA students. It is based on extensive consulting in emerging economies and several years of experience teaching executive MBA courses around the globe. The author has continually faced the problem that the available textbooks for teaching international business focused almost exclusively on examples of Western multinationals for case illustrations. In the process of preparing cases nearer to the emerging market she worked in the author realized that the often fascinating frequently insightful and always different approach to business illustrated by these cases should be required reading for MBA students in typical Western environments too. With its wide range of current case illustrations and concise summaries this is a new generation text that will welcome today's MBA student to the wider world of 21st century international business. This book is needed not only because it looks at business from the BRICs points of view it also looks at business from the point of view of tomorrow's business leaders and the challenges that they will have to cope with. Professor Jonathan Gosling Centre for Leadership Studies and co-founder The One Planet MBA the University of Exeter UK. Stephanie Jones advises Western businesses on doing business in emerging economies in a refreshingly straightforward manner integrating in a novel way her three decades of global practical experience with the daily barrage of reporting on the BRICs distilling from these many lessons and principles. Extracted from the Foreword by Professor Wim Naud Director of Research Maastricht School of Management.
