Excerpt The Mitsubishi 4B1 engine is a range of all alloy straight 4 engines built at Mitsubishi s Japanese World Engine

powertrain plant in Shiga on the basis of the Global Engine Manufacturing Alliance GEMA Although the basic designs of the

various engines are the same their exact specifications are individually tailored for each partner Chrysler Mitsubishi and

Hyundai The cylinder block and other basic structural parts of the engine were jointly developed by the GEMA companies but

the intake and exhaust manifolds the cylinder head s intake and exhaust ports and other elements related to engine tuning

were independently developed by Mitsubishi All engines developed within this family have aluminium cylinder block and

head four valves per cylinder double overhead camshaft layouts and MIVEC continuous variable valve timing The 4B1 engine

family is the first to have the continuously variable valve timing MIVEC system applied not only to its intake valves but also to

its exhaust valves The intake and exhaust cam timing is continuously independently controlled and provide four optimized

engine operating modes The engines s bore and stroke both measure 86 0 mm which engineers refer to as square According
