Wilson,2002 On October 23 1852 Professor Augustus De Morgan wrote a letter to a colleague unaware that he was launching one of the most famous mathematical conundrums in history one that would confound thousands of puzzlers for more than a century This is the amazing story of how the map problem was solved The problem posed in the letter came from a former student What is the least possible number of colors needed to fill in any map real or invented so that neighboring counties are always colored differently This deceptively simple question was of minimal interest to cartographers who saw little need to limit how many colors they used But the problem set off a frenzy among professional mathematicians and amateur problem solvers among them Lewis Carroll an astronomer a botanist an obsessive golfer the Bishop of London a man who set his watch only once a year a California traffic cop and a bridegroom who spent his honeymoon coloring maps In their pursuit of the solution mathematicians painted maps on doughnuts and horseshoes and played with patterned soccer balls and the great rhombicuboctahedron It would be more than one hundred years and countless colored maps later before the result was finally established Even then difficult questions remained and the intricate solution which involved no fewer than 1 200 hours of computer time was greeted with as much dismay as enthusiasm Providing a clear and elegant explanation of the problem and the proof Robin Wilson tells how a seemingly innocuous question baffled great minds and stimulated exciting mathematics with far flung applications This is the entertaining story of those who failed to prove and those who ultimately did prove that four colors do indeed suffice to color any map
