Senate. Committee on Appropriations. Subcommittee on Transportation and Related Agencies,1986 **The Problem with Software** Adam Barr,2018-10-23 An industry insider explains why there is so much bad software and why academia doesn't teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not that good at it In *The Problem with Software* Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn't teach programmers what they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It's an open secret that there is little engineering in software engineering which continues to rely not on codified scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today's embrace of the cloud He explains bugs and why software has so many of them and why today's interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship Hispanic Engineer & IT ,1991 *Hispanic Engineer Information Technology* is a publication devoted to science and technology and to promoting opportunities in those fields for Hispanic Americans *Mathematics of Industrial Systems I* ,1995 WHY ANYTHING - WHY NOT NOTHING: THE GOLDBLOCKS PARAGON Captain Robert Cowley,2019-09-24 Captain Robert Cowley walked a deserted Pacific beach it was pre dawn dark and chilly Suddenly he heard a voice Robert look up He looked up and observed the faint glow of Mars and billions of stars The voice spoke again Why anything Why not nothing Cowley an archetypal on and off believer wrote *Why Anything Why Not Nothing* for atheists theists scientists evolutionists and more He asks are humans the remnants of a natural big bang that coalesced into a universe or might we be the creation of a supernatural God Asking

difficult questions and challenging the bounds of human reason logic and intelligence he reviews Biblical science against modern science and the limitations inherent in matter he seeks to understand how and why we are here Cowley searches for answers in the cosmos and in the supernatural philosophy of two monotheistic religions Judaism and Christianity He ponders with amazing intelligible lucidity is evolution or God responsible for life

Digital Dice Paul Nahin, 2013-03-24 Some probability problems are so difficult that they stump the smartest mathematicians But even the hardest of these problems can often be solved with a computer and a Monte Carlo simulation in which a random number generator simulates a physical process such as a million rolls of a pair of dice This is what Digital Dice is all about how to get numerical answers to difficult probability problems without having to solve complicated mathematical equations Popular math writer Paul Nahin challenges readers to solve twenty one difficult but fun problems from determining the odds of coin flipping games to figuring out the behavior of elevators Problems build from relatively easy deciding whether a dishwasher who breaks most of the dishes at a restaurant during a given week is clumsy or just the victim of randomness to the very difficult tackling branching processes of the kind that had to be solved by Manhattan Project mathematician Stanislaw Ulam In his characteristic style Nahin brings the problems to life with interesting and odd historical anecdotes Readers learn for example not just how to determine the optimal stopping point in any selection process but that astronomer Johannes Kepler selected his second wife by interviewing eleven women The book shows readers how to write elementary computer codes using any common programming language and provides solutions and line by line walk throughs of a MATLAB code for each problem Digital Dice will appeal to anyone who enjoys popular math or computer science In a new preface Nahin wittily addresses some of the responses he received to the first edition
