Neuroscience Of Decision Making Journal:

Neuroscience of Decision Making Oshin Vartanian, David R. Mandel, 2011-04-14 The intersection between the fields of behavioral decision research and neuroscience has proved to be fertile ground for interdisciplinary research Whereas the former is rich in formalized models of choice the latter is rife with techniques for testing behavioral models at the brain level As a result there has been the rapid emergence of progressively more sophisticated biological models of choice geared toward the development of ever more complete mechanistic models of behavior This volume provides a coherent framework for distilling some of the key themes that have emerged as a function of this research program and highlights what we have learned about judgment and decision making as a result Although topics that are theoretically relevant to judgment and decision making researchers are addressed the book also ventures somewhat beyond the traditional boundaries of this area to tackle themes that would of interest to a greater community of scholars Neuroscience of Decision Making provides contemporary and essential reading for researchers and students of cognitive psychology neuroscience philosophy and economics

Neuroscience of Preference and Choice Raymond J. Dolan, Tali Sharot, 2012 One of the most pressing questions in neuroscience psychology and economics today is how does the brain generate preferences and make choices With a unique interdisciplinary approach this volume is among the first to explore the cognitive and neural mechanisms mediating the generation of the preferences that guide choice From preferences determining mundane purchases to social preferences influencing mating choice through to moral decisions the authors adopt diverse approaches to answer the question Chapters explore the instability of preferences and the common neural processes that occur across preferences Edited by one of the world's most renowned cognitive neuroscientists each chapter is authored by an expert in the field with a host of international contributors Emphasis on common process underlying preference generation makes material applicable to a variety of disciplines neuroscience psychology economics law philosophy etc Offers specific focus on how preferences are generated to guide decision making carefully examining one aspect of the broad field of neuroeconomics and complementing existing volumes Features outstanding international scholarship with chapters written by an expert in the topic area

Goal-Directed Decision Making Richard W. Morris, Aaron Bornstein, Amitai Shenhav, 2018-08-23 Goal Directed Decision Making Computations and Neural Circuits examines the role of goal directed choice It begins with an examination of the computations performed by associated circuits but then moves on to in depth examinations on how goal directed learning interacts with other forms of choice and response selection This is the only book that embraces the multidisciplinary nature of this area of decision making integrating our knowledge of goal directed decision making from basic computational clinical and ethology research into a single resource that is invaluable for neuroscientists psychologists and computer scientists alike The book presents discussions on the broader field of decision making and how it has expanded to incorporate ideas related to flexible behaviors such as cognitive control economic choice and Bayesian inference as well as

the influences that motivation context and cues have on behavior and decision making Details the neural circuits functionally involved in goal directed decision making and the computations these circuits perform Discusses changes in goal directed decision making spurred by development and disorders and within real world applications including social contexts and addiction Synthesizes neuroscience psychology and computer science research to offer a unique perspective on the central and emerging issues in goal directed decision making

Decision Making by Individuals with Intellectual and Developmental Disabilities Ishita Khemka,Linda Hickson,2021-11-23 This book examines theoretical considerations in the study of decision making as well as practical applications in social interpersonal domains for adolescents and adults with intellectual and developmental disabilities IDD It provides a history of the study of decision making in individuals with IDD and examines emerging views on decision making from a positive psychology perspective The book explores the role of decision making in self determination as well as offers global perspectives on the rights and responsibilities of individuals with IDD to engage in independent decision making It outlines a framework for the study of decision making in individuals with IDD reviews research that addresses the role of culturally diverse influences on individual decision making and examines likely consequences of the etiological bases of disability on decision making profiles Key areas of coverage include Critical role of basic processes of cognition motivation and self beliefs affect and emotion and various styles of decision making Applications of decision making skills within family and community contexts in personal and social relationships during transition to adulthood and more independent lifestyles and in successful community living Self protective decision making by individuals in situations of abuse as well as in resisting peer victimization and bullying Decision making parameters for enabling maximum participation in self decision making through shared and supported decision making in contexts such as health care aging and end of life decisions Research based interventions to improve effective decision making in individuals with IDD Decision Making by Individuals with Intellectual and Developmental Disabilities is a must have reference for researchers professors and graduate students as well as clinicians and other professionals in the fields of developmental and positive psychology rehabilitation social work special education occupational speech and language therapy public health and healthcare policy

Developmental Psychopathology, Developmental Neuroscience Dante Cicchetti,2016-02-29 The complete reference of biological bases for psychopathology at any age Developmental Psychopathology is a four volume compendium of the most complete and current research on every aspect of the field Volume Two Developmental Neuroscience focuses on the biological basis of psychopathology at each life stage from nutritional deficiencies to genetics to functional brain development to evolutionary perspectives and more Now in its third edition this comprehensive reference has been fully updated to better reflect the current state of the field and detail the newest findings made possible by advances in technology and neuroscience Contributions from expert researchers and clinicians provide insight into brain development molecular genetics methods neurogenics approaches to pathway mapping structural neuroimaging and much more including targeted discussions of specific disorders Advances in developmental psychopathology have burgeoned since the 2006 publication of the second edition and keeping up on the latest findings in multiple avenues of investigation can be burdensome to the busy professional This series solves the problem by collecting the information into one place with a logical organization designed for easy reference Consider evolutionary perspectives in developmental psychopathology Explore typical and atypical brain development across the life span Examine the latest findings on stress schizophrenia anxiety and more Learn how genetics are related to psychopathology at different life stages The complexity of a field as diverse as developmental psychopathology deepens with each emerging theory especially with consideration of the rapid pace of neuroscience advancement and genetic discovery Developmental Psychopathology Volume Two Developmental Neuroscience provides an invaluable resource by compiling the latest information into a cohesive broad reaching reference

Handbook of Emotion Regulation, Second Edition James J. Gross,2015-02-19 Subject Areas Keywords clinical cognition cognitive developmental disorders dysregulation emotion regulation emotional emotions neurobiology

neuroscience personality psychology psychopathology research self regulation social Description Reviewing the state of the science in a dynamic thriving field this influential handbook integrates knowledge from multiple psychological subdisciplines Foremost experts address the neurobiological and cognitive bases of emotion regulation and examine how individuals develop and use regulatory strategies across the lifespan The social context of emotion regulation is explored as are personality processes and individual differences Critical implications are discussed for psychopathology psychosocial interventions and health Including helpful cross referencing among chapters the volume describes cutting edge methods and identifies promising directions for future investigation

Perceptual Learning Barbara Doshier,Zhong-Lin Lu,2020-10-13 A comprehensive and integrated introduction to the phenomena and theories of perceptual learning focusing on the visual domain Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount This improvement is called perceptual learning in contrast to learning in the cognitive or motor domains and it has become an active area of research of both theoretical and practical significance This book offers a comprehensive introduction to the phenomena and theories of perceptual learning focusing on the visual domain Perceptual Learning explores the tradeoff between the competing goals of system stability and system adaptability signal and noise retuning and reweighting and top down versus bottom down processes It examines and evaluates existing research and potential future directions including evidence from behavior physiology and brain imaging and existing perceptual learning applications with a focus on important theories and computational models It also compares visual learning to learning in other perceptual domains and considers the application of visual training methods in the development of perceptual expertise and education as well as in remediation for limiting visual conditions It provides an integrated treatment of the subject for students and researchers and for practitioners who want to incorporate perceptual learning into their practice Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount This improvement is called perceptual learning in contrast with learning in the cognitive or motor domains Perceptual learning has been a very active area of research of both theoretical and practical interest Research on perceptual learning is of theoretical significance in illuminating plasticity in adult perceptual systems and in understanding the limitations of human information processing and how to improve them It is of practical significance as a potential method for the development of perceptual expertise in the normal population for its potential in advancing development and supporting healthy aging and for noninvasive amelioration of deficits in challenged populations by training Perceptual learning has become an increasingly important topic in biomedical research Practitioners in this area include science disciplines such as psychology neuroscience computer sciences and optometry and developers in applied areas of learning game design cognitive development and aging and military and biomedical applications Commercial development of training products protocols and games is a multi billion dollar industry Perceptual learning provides the basis for many of the developments in these areas This book is written for anyone who wants to

understand the phenomena and theories of perceptual learning or to apply the technology of perceptual learning to the development of training methods and products Our aim is to provide an introduction to those researchers and students just entering this exciting field to provide a comprehensive and integrated treatment of the phenomena and the theories of perceptual learning for active perceptual learning researchers and to describe and develop the basic techniques and principles for readers who want to successfully incorporate perceptual learning into applied developments The book considers the special challenges of perceptual learning that balance the competing goals of system stability and system adaptability It provides a systematic treatment of the major phenomena and models in perceptual learning the determinants of successful learning and of specificity and transfer The book provides a cohesive consideration of the broad range of perceptual learning through the theoretical framework of incremental learning of reweighting evidence that supports successful task performance It provides a detailed analysis of the mechanisms by which perceptual learning improves perceptual limitations the relationship of perceptual learning and the critical period of development and the semi supervised modes of learning that dominate perceptual learning It considers limitations and constraints on learning multiple tasks and stimuli simultaneously the implications of training at high or low levels of performance accuracy and the importance of feedback to perceptual learning The basis of perceptual learning in physiology is discussed along with the relationship of visual perceptual learning to learning in other sensory domains The book considers the applications of perceptual learning in the development of expertise in education and gaming in training during development and aging and applications to remediation of mental health and vision disorders Finally it applies the phenomena and models of perceptual learning to considerations of optimizing training
