

Peer Reviewing Journal Articles

As well as contributing to the quality of the research corpus in your field, conducting peer reviews can benefit your own career as a researcher. The benefits include:

- 1** Learning more about the editorial process. By reviewing a paper and liaising with the editorial office, you will gain first-hand experience of the key considerations that go into the publication decision, as well as commonly recommended revisions.
- 2** Keeping up to date with novel research in your field. Reviewing also gives you a glimpse of emerging research in your discipline, sometimes months before it is to be published.
- 3** Having an opportunity to demonstrate your expertise in a field. It is becoming more common for researchers to use their review experience as evidence of their expertise when applying for funding or job applications, whether this is done informally or through validated reviewer recognition sites such as Publons.
- 4** Some journals are also experimenting with providing direct incentives to reviewers, such as payments, discounts on article processing charges and access to content.

The Death of Science Andrew Holster, 2016-07-26 Modern science is in unprecedented crisis It is a crisis at many levels continuous with larger crises of modern society It is a crisis for the vocation of the scientist

working within the modern institutionalised structures of science It is a crisis for our capacity to use science benevolently to help solve larger material organisational and ultimately political problems of the modern era And it is a crisis for philosophy for the role of natural science to help inform our world view The Death of Science is an account of deeper causes of this malaise It starts by taking up the reins of Lopez Corredoira's 2013 The Twilight of the Scientific Age a recent critique that concludes with modern science on its death bed It dissects key themes in detail illustrated in the same frank style drawing on personal examples It starts with deep issues in the philosophy of science recounting failed modern concepts of scientific progress method and truth going on to failures of peer review and gate keeping as quality control systems the domination of propaganda and marketing channels as the critical tools for professional success and the major outcome for creative scientists themselves the destruction of scientific creativity and exclusion of heterodox thinkers in this degraded environment It connects the behavioural symptoms with a psycho social analysis of the bureaucratic mode of organisation under which science like all other modern vocations is now subsumed The account supports Lopez Corredoira's appraisal which sees a modern science industry driven by greed and ambition repressing imagination and freedom destructive of novelty and diversity of ideas controlled by bureaucratic academic power hierarchies While science is irrevocably corrupted by its modern mass institutionalisation the true spirit of science can only be sustained by individuals with a real vocation as scientists or natural philosophers who seek understanding and meaning and wisdom rather than technocratic specialisation and careers But it is increasingly impossible for scientists to withstand forces of professional conformity and maintain their personal sense of value A number of current controversies in some core sciences are also discussed and it is argued that the greatest revelations of real science are yet to come While Establishment Science has locked itself into dogmatic paradigms the failures of present theories show that we are really on the cusp of major revolutions spanning sciences of physics and cosmology information and intelligence biology and evolution and mind and consciousness If these are realised they will profoundly change our understanding of the nature of the world and ourselves But any such revolutions challenge a Science Establishment locked into the self interest of its power brokers and are unlikely to occur except through independent scientists working outside the institutional system The book concludes with a brief discussion of the place of independent scientists
