**Population Genetics in the Neotropics** Marcos Vinícius Bohrer Monteiro Siqueira, Enéas Ricardo Konzen, Pedro Manoel Galetti Junior, 2025-04-23 The Neotropics hold high levels of biodiversity figuring among the essential hotspots for conservation on Earth Invaluable genetic resources of this biogeographic dominion must deserve attention of conservationists as well as of breeders This project is aimed at producing a book on population genetics directed to an audience of undergraduate and graduate students but not limited to those In a distinct approach we seek to develop a material devoted to population genetics in the Neotropics contextualizing examples of several animal and plant species belonging to this highly diverse dominion Traditional books available in the subject of population genetics commonly deal with organisms that are native to North America and Europe while neotropical organisms are lacking in the context so our book comes forth as an initiative towards covering that Among several subjects this textbook addresses studies on molecular evolution and phylogenetics genetic structure at broad and fine spatial scales landscape genetics niche modeling and climate change conservation genetics and quantitative variation and its genetic components in hotspots of biodiversity such as the Amazon the Brazilian Savanna and the Atlantic Rain Forest It should provide an easy going reading with the main concepts being presented and contextualized within the Neotropical dynamics of plants and animal populations Basic mathematical foundations of population genetics theory are provided but no further details on deductions and advanced algebra are given for the purpose of simplicity The application of the studies on conservation and breeding is also addressed The chapters were planned to be brief describing the main concepts processes and case studies Invited authors were encouraged to describe examples from their own research in the Neotropics Altogether this project may offer students with a textbook with concepts and ideas of the Neotropical genetic diversity bringing awareness and stimulating endeavors towards the continuance of conservation of endangered species in their environments of origin *A guide to northern sea cucumbers* Mercier, A., Penney, H.D., Ma, K.C.K., Lovatelli, A., Hamel, J.-F., 2023-10-04 This document synthesising knowledge on the northern sea cucumber *Cucumaria frondosa* was prepared for all stakeholders including industry participants government scientists policymakers and academic researchers Its aim is to highlight the uniqueness of this marine resource to guide the industry forward and to emphasize areas that deserve further investigation Available data from eastern and northern Canada eastern United States of America Greenland northern Europe and the Russian Federation are presented Topics covered include the taxonomy distribution biology and ecology of the species the natural threats it faces the current harvesting processing and marketing practices and the prospects for aquaculture development Relying on a knowledge base gathered over more than 40 years this contribution compares *C. frondosa* with other common commercial species of sea cucumbers to tease out the major aspects that set it apart A final section provides a number of key recommendations for its management and conservation Population Genetics Matthew B. comprehensive and provides a self contained reference      Human Population Genetic Research in Developing Countries Yue Wang,2013-11-12 Human population genetic research HPGR seeks to identify the diversity and variation of the human genome and how human group and individual genetic diversity has developed This book asks whether developing countries are well prepared for the ethical and legal conduct of human population genetic research with specific regard to vulnerable target group protection The book highlights particular issues raised by genetic research on populations as a whole such as the potential harm specific groups may suffer in genetic research and the capacity for current frameworks of Western developed countries to provide adequate protections for these target populations Using The People s Republic of China as a key example Yue Wang argues that since the target groups of HPGR are almost always from isolated and rural areas of developing countries the ethical and legal frameworks for human subject protection need to be reconsidered in order to eliminate or at least reduce the vulnerability of those groups While most discussion in this field focuses on the impact of genetic research on individuals this book breaks new ground in exploring how the interests of target groups are also seriously implicated in genetic work In evaluating current regulations concerning prevention of harm to vulnerable groups the book also puts forward an alternative model for group protection in the context of human population genetic research in developing countries The book will be of great interest to students and academics of medical law ethics and the implications of genetic research      **Index Medicus** ,2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
