Peavey Basic 112 Manual:

Log Construction Manual Robert Wood Chambers, 2003 Log buildings are embedded deeply into North American history and culture. For more than one thousand years, builders have been weaving logs into homes, shelters, barns, and churches. Today, however, the buildings where we live and work are rarely handmade from natural materials. In this context, handcrafted scribe-fitted natural log buildings are an attractive and uplifting alternative to conventional buildings and building materials. This book tells you what you need to know to build your own log home and also reveals the deep rhythms and patterns of log construction. Author Robert Chambers shows how to take naturally shaped tapered round logs and scribe-fit them one to another so that they look like they actually grew together in the woods. The *Log Construction Manual* is filled with information available nowhere else, including the Log Selection Rules, Chambers's brilliantly simple method for choosing which log to use next, instructions for building hip and valley log rafters and roof trusses from full round logs, step-by-step directions for laying out the sill logs for virtually any floor plan, including hexagons, pentagons, and more, state-of-the-art compression-fit saddle notches and underscribing to keep fits tight over time, details on scribing and cutting long grooves and corner notches, just like the pros, and more. Chambers also offers advice on organizing and financing a log home project and has loads of experience to share on cutting costs and avoiding common pitfalls. He presents practical ideas for saving money and controlling costs. Although handcrafted log homes are expensive to buy, they are within reach for many as owner-managed building projects. Written concisely with great care in explaining important details, the *Log Construction Manual* brings clarity, insight, depth, and even humor to the log builder's craft. This is a comprehensive book for log home owner-builders, beginners, as well as professionals.
