Applied Food Protein Chemistry Zeynep

Ustunol,2014-12-19 Food proteins are of great interest not only because of their nutritional importance and their functionality in foods but also for their detrimental effects Although proteins from milk meats including fish and poultry eggs cereals legumes and oilseeds have been the traditional sources of protein in the human diet potentially any proteins from a biological source could serve as a food protein The primary role of protein in the diet is to provide the building materials for the synthesis of muscle and other tissues and they play a critical role in many biological processes They are also responsible for food texture color and flavor Today food proteins are extracted modified and incorporated into processed foods to impart specific functional properties They can also have adverse effects in the diet proteins such as walnuts pecans almonds and cashews soybean wheat milk egg crustacean and fish proteins can be powerful allergens for some people Applied Food Protein Chemistry is an applied reference which reviews the properties of food proteins and provides in depth information on important plant and animal proteins consumed around the world The book is grouped into three sections 1 overview of food proteins 2 plant proteins and 3 animal proteins Each chapter discusses world production distribution utilization physicochemical properties and the functional properties of each protein as well as its food applications The authors for each of the chapters are carefully selected experts in the field This book will be a valuable reference tool for those who work on food proteins It will also be an important text on applied food protein chemistry for upper level students and graduate students of food science programs

Instant Insights: Environmental impact of livestock production Dr Taro Takahashi,Dr

Graham A. McAuliffe,Prof. Michael R. F. Lee,Dr Julie Wolf,Prof. G. J. Thoma,Ilkka Leinonen,S. F. Ledgard,2021-01-26 This collection features five peer reviewed literature reviews on the environmental impact of livestock production The first chapter discusses life cycle assessment LCA and its role in evaluating the environmental footprint of farming systems The chapter also explores how the practical trade off between feasibility and scientific rigour should be addressed in the field of ruminant production systems The second chapter explores some of the many facets of livestock s contributions to climate change and the difficulties involved in quantifying them with a closer look into the contribution of livestock methane emissions to changing atmospheric methane concentrations over the last few decades The third chapter presents a review of

the environmental sustainability impacts of swine production focused at the farm level because the majority of environmental impacts occur by this stage of the supply chain The fourth chapter considers the potential strategies that can be implemented to improve the environmental performance of intensive poultry systems The final chapter examines how LCA can be used as a tool to quantify multiple resource use and environmental impacts The chapter details how potentially harmful emissions can be assessed and measured at each stage in the life cycle of sheep products
