

Designing a seat and mirror memory to a memory button using the memory system

After you have adjusted your seat and mirror, you must save them for 10 seconds to make the saving to a memory button on the memory system.

- Remove the key from the ignition.
- Press the "Save" button for the memory system (see page 55) and hold it until you hear an upward signal to let the driver that the seat and mirror settings have been registered to a memory button.

Notes

- If you have designed a seat and mirror setting to a memory button using the memory key, and then designed a new setting using a different key, the last setting will be stored and the new one will be maintained in its place.
- The assignment of a memory key to a memory button is maintained even if you store new seat and mirror adjustments to the button.
- If the vehicle battery is disconnected, all assignments between the remote control and memory buttons are erased.

Restoring seat and mirror adjustments for driving forward

The settings stored can be restored both with the memory buttons **B** and with the re-disconnected vehicle system.

Restoring using the memory buttons

For safety reasons, the seat and mirror adjustments can be restored only with the system **switched off**. You can choose to restore two different systems.

Restoring memory for the driver's seat and mirror
The memory system has two memory buttons, **B** and **C**, for the driver's seat and mirror.

Pressing the memory button
With the driver's door closed, press the memory button **B** and the seat and mirror settings will be restored.

Note

If, during the memory restoration, the vehicle battery is disconnected, the system will be interrupted. If you try to use the button that was last pressed, the system will restore the settings of the other button. If you press both memory buttons, the system will restore the settings of both.

Restoring using the driver's key

The seat and mirror settings can also be restored with the system **switched off** and the driver's door closed.

Press the "Save" button of the memory system (see page 55) and then press the driver's key.

During the restoration, the system will emit a signal to let the driver know.

Restoring mirror adjustments for driving in reverse

- Switch the system on.
- Select the right outside mirror (see page 55).
- Press the **R** (Reverse) gear.
The right outside mirror will move automatically into the preset position.

Note

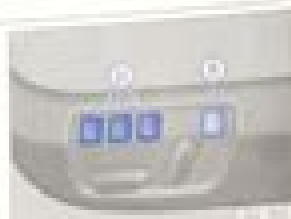

In order to see through the rearview mirror, the right outside mirror must fold into the position closest to driving forward.

Emergency off

In an emergency, you can interrupt any restoration procedure by pressing on the locking switch **L** (unlocking), turning one of the memory buttons or pressing one of the seat adjustment switches.

Switch on using the locking button

- After pressing the locking switch **L**, the memory system is automatically switched off. You can then only adjust the seat and the outside mirror manually. By pressing the locking switch **L** again, you can restart the memory system function. However, any further procedure that has been interrupted will not be continued.

The restoration will occur if the system is off with locking switch **L**. The vehicle will be used only temporarily by a driver whose seat and mirror adjustments do not need to be saved.

Initializing the memory system

After disconnecting the vehicle battery, you must "reinitialize" the memory system. Otherwise, it is no longer possible to store settings in memory.

- Open the driver's door.
- Switch the system on.
- Move the seat to the front and top stops (see page 55).
- Move the "lockdown" forward to the stop (see page 55).

The memory system is now reinitialized and has again fully functioned.
