that will set your child's intellectual and social development back by years. The truth is nature and nurture are in a delicate dance; if one goes too fast the other one falls. Science tells us that early childhood experiences have the capacity to structure and alter the brain. That means you didn't just supply your child's DNA; you're still shaping it. And it's only by wielding this power that your child will activate their full potential. You are truly a gene therapist, manipulating and guiding your child's genetic makeup based on the experiences you create for them. Contrary to what modern parenting trends have told us, parenting is much simpler than we dared to imagine. Great parenting comes down to one mission: to be prepped and present for the windows of your child's development so that you can take full advantage of these formative periods and help your child become a smart, successful, self-sufficient adult. It doesn't require formal training or a fancy degree; all it takes is getting involved. Once parents learn how to flip the right gene switches, they can expand the limits of their child's potential and lay the emotional and intellectual groundwork that allows them to seize opportunities for success fearlessly, naturally, and enthusiastically. With a PhD in education and a second in psychology and forty years of experience as an educator, Dr. Gross combines an understanding of childhood development with practical and realistic tools to teach parents how to best take advantage of their child's developmental windows. *Your Baby's Brain* translates the results from scientific studies about expanding consciousness and performance into day-to-day interaction between parents and children. *101 Baby Hacks*

MESSAGE OF HIS HOLINESS THE 14TH DALAI LAMA Leaving aside the complex question of the creation and evolution of our universe we can at least agree that each of us is the product of our own parents In general our conception took place not just in the context of sexual desire but from our parents decision to have a child Such decisions are founded on responsibility and altruism the parent s compassionate commitment to care of their child until it is able to take care of itself Thus from the very moment of our conception our parents love is directly in our creation Moreover we are completely dependent upon our mothers care from the earliest stages of our growth According to some scientists a pregnant woman s mental state be it calm or agitated has a direct physical effect on her unborn child The expression of love is also very important at the time of birth Since the very first thing we do is suck milk from our mothers breast we naturally feel close to her and she must feel love for us in order to feed us properly if she feels anger or resentment her milk may not flow freely Then there is the critical period of brain development from the time of birth up to at least the age of three or four during which time loving physical contact is the single most important factor for the normal growth of the child If the child is not held hugged cuddled or loved its development will be impaired and its brain will not mature properly Since a child cannot survive without the care of others love is its most important nourishment The happiness of childhood the allaying of the child s many fears and the healthy development of its self confidence all depend directly upon love Nowadays many children grow up in unhappy homes If they do not receive proper affection in later life they will rarely love their parents and not infrequently will find it hard to love others This is very sad As children grow older and enter school their need for support must be met by their teachers If a teacher not only imparts academic education but also assumes responsibility for preparing students for life his or her pupils will feel trust and respect and what has been taught will leave an indelible impression on their minds On the other hand subjects taught by a teacher who does not show true concern for his or her students overall well being will be regarded as temporary and not retained for long Above is an excerpt from the section on Articles and messages relating to His Holiness the Dalai Lama s commitment to promote basic human values <https://www.dalailama.com/messages/compassion-and-human-values/compassion>

The Adult Baby Identity - Healing Childhood Wounds Dylan Lewis, 2019-11-05 It is said that no one gets out of childhood unharmed And for diaper wearers and Adult Babies it is way too true This is one of those truisms that understands that we all carry some scars and drag around some burden that developed in childhood Despite the best efforts of parents family teachers and those around us there are always things we pick up along the way that causes us a measure of trouble or difficulty later on Parents are not perfect and Mary Poppins is not real Life is full of mistakes failings and weakness even in the best of people Fortunately for most of us these childhood grown issues are relatively small and well within our capacity to manage and live with But not everyone is so lucky This new book by Dylan Lewis the third in the series

explores the issue of early childhood where our memories do not reach but the effects are still felt today For Adult Babies there is an element of difficulty or trauma that was most likely trivial to everyone else but wounding to ABs Go on a journey of discovery with Dylan Lewis and Healing Childhood Wounds
